Contents

Foreword *XIX*
Preface *XXI*

1 Historical Introduction *1*

2 The Standard Model *9*
2.1 Introduction *9*
2.2 Standard Electroweak Model *9*
2.2.1 Electroweak Gauge Bosons *10*
2.2.2 Standard Model Matter Fields *10*
2.3 Spontaneous Symmetry-Breaking: Mass Generation *13*
2.4 Quantization in the Standard Model *17*
2.5 Renormalization in the Standard Model *19*
2.6 Anomalies *21*
2.6.1 The Axial Anomaly *21*
2.6.2 Gauge Anomalies *23*
2.7 Quantum Chromodynamics *24*
2.8 Higgs Boson and Unitarity in the Standard Model *25*
2.9 Theory Considerations on the Higgs Boson Mass *27*
2.10 Experimental Tests of the Standard Model *30*
2.11 Open Issues in the Standard Model *32*
2.11.1 The Hierarchy Problem *34*
2.11.2 Coupling Constant Unification *36*
2.12 Summary *38*
2.13 Problems for Chapter 2 *39*

3 Neutrino Masses and Mixing *41*
3.1 Two-Component Formalism *41*
3.2 Quantization of Majorana and Dirac Fermions *43*
3.3 The Lepton Mixing Matrix *45*
3.3.1 Lepton Mixing Matrix for Dirac Neutrinos *45*
3.3.2 Lepton Mixing Matrix for Majorana Neutrinos: Unitary Approximation *47*

3.3.3 General Seesaw-Type Lepton Mixing Matrix *48*
3.3.3.1 Symmetrical Parametrization of the General Lepton Mixing Matrix *48*
3.4 The Neutrino Neutral Current in Seesaw-Type Schemes *50*
3.5 CP Properties of Majorana Fermions *50*
3.5.1 CP Properties and Neutrinoless Double-Beta Decay *51*
3.5.2 Electromagnetic Properties of Majorana Neutrinos *52*
3.5.3 Majorana–Dirac 'Confusion Theorem' *53*
3.6 Summary *54*
3.7 Problems for Chapter 3 *54*

4 Neutrino Oscillations *57*
4.1 Preliminaries *57*
4.2 Neutrino Oscillations Formalism *In Vacuo* *57*
4.3 Matter Effects in Neutrino Oscillations *62*
4.4 Neutrino Oscillation Data *65*
4.4.1 Solar Neutrino Data *65*
4.4.2 Reactor Neutrino Data *67*
4.4.3 Atmospheric Neutrino Data *69*
4.4.4 Accelerator Neutrino Data *73*
4.4.5 The Measurement of θ_{13} *74*
4.5 Global Neutrino Oscillation Analysis *76*
4.6 Global Fit Results for Neutrino Oscillation Parameters *77*
4.7 Summary and Outlook *80*
4.8 Problems for Chapter 4 *83*

5 Robustness of Oscillations: The Case of Solar Neutrinos *87*
5.1 Theoretical Preliminaries: Beyond the Standard Model *88*
5.2 Beyond the Standard Solar Model *91*
5.3 Oscillations with Spin-Flavour Precession *94*
5.4 Constraining Neutrino Magnetic Moments *97*
5.5 Summary *100*
5.6 Problems for Chapter 5 *100*

6 Absolute Neutrino Masses *103*
6.1 Preliminaries *103*
6.2 Beta-Decay and Direct Searches for Neutrino Mass *103*
6.2.1 Relativistic Beta-Decay Kinematics *104*
6.2.2 Beta Decay in the Three-Neutrino Case *106*
6.3 Neutrinoless Double-Beta Decay *110*
6.4 Light-Neutrino Exchange $0\nu\beta\beta$ Mechanism *112*
6.5 Experimental Prospects in the Search for $0\nu\beta\beta$ *115*
6.6 Neutrinoless Double-Beta Decay in Flavour Models *115*
6.7 Short-Range Contributions to $0\nu\beta\beta$ Decay and the Weak Interaction Scale *117*

6.8 Black Box and the Significance of $0\nu\beta\beta$ *120*
6.9 Summary *121*
6.10 Problems for Chapter 6 *121*

7 Neutrino Masses in $SU(3)_c \otimes SU(2)_L \otimes U(1)_Y$ Theories *123*
7.1 Preliminaries: The Origin of Neutrino Mass *123*
7.2 Effective Seesaw Mechanism: Explicit Lepton Number Violation *125*
7.3 Seesaw Dynamics in $SU(3)_c \otimes SU(2)_L \otimes U(1)_Y$ and the Majoron *127*
7.3.1 Basic Considerations *127*
7.3.2 The Majoron in the $SU(3)_c \otimes SU(2)_L \otimes U(1)_Y$ Seesaw *128*
7.3.3 The Structure of Majoron Couplings: Type I Seesaw Example *130*
7.3.4 Inverse $SU(3)_c \otimes SU(2)_L \otimes U(1)_Y$ Seesaw Mechanism *132*
7.4 Summary *134*
7.5 Problems for Chapter 7 *134*

8 Higgs Boson Physics and Neutrinos *135*
8.1 Higgs Production in the Standard Model *135*
8.1.1 Higgs Production at Electron–Positron Colliders *136*
8.1.1.1 Higgs-Strahlung Processes *136*
8.1.1.2 Vector Boson Fusion *136*
8.1.2 Higgs Production at Hadron Colliders *139*
8.1.2.1 Associated Production with the *W/Z* Bosons *140*
8.1.2.2 The Vector Boson Fusion Mechanism *141*
8.1.2.3 The Gluon–Gluon Fusion Process *141*
8.1.2.4 Associated Production with Heavy Quarks *142*
8.2 Higgs Decays in the Standard Model *142*
8.2.1 Decays into Fermions: Quarks and Leptons *143*
8.2.2 Decays into *W/Z* Gauge Bosons *143*
8.2.2.1 Two-Body Final States *144*
8.2.2.2 Three-Body Final States *144*
8.2.2.3 Four-Body Final States *145*
8.2.3 Loop-Induced Higgs Boson Decays: $\gamma\gamma$, γZ and gg *145*
8.2.3.1 $H \to \gamma\gamma$ *145*
8.2.3.2 $H \to Z_\gamma$ *146*
8.2.3.3 $H \to gg$ *147*
8.2.3.4 Standard Model Higgs Boson Branching Ratio Summary *147*
8.3 Higgs Physics in Models with Low-Scale Lepton Number Violation *147*
8.3.1 Invisible Higgs Boson Decays *148*
8.4 Summary *150*
8.5 Problems for Chapter 8 *151*

9 Supersymmetry *153*
9.1 Introduction and Motivation *153*
9.2 Supersymmetry Algebra and Representations *155*

9.2.1 Supersymmetry Algebra *155*
9.2.2 Implications of the Supersymmetry Algebra *156*
9.2.3 Supersymmetry Representations *157*
9.2.3.1 Massive Case *157*
9.2.3.2 Massless Case *158*
9.3 How to Build a Supersymmetric Model *158*
9.3.1 Kinetic Terms *159*
9.3.2 Interactions *159*
9.3.2.1 Self- Interactions of the Gauge Multiplet *159*
9.3.2.2 Interactions of the Gauge and Matter Multiplets *159*
9.3.2.3 Self- Interactions of the Matter Multiplet *160*
9.3.3 Supersymmetry-Breaking Lagrangian *160*
9.3.4 R-Parity *161*
9.4 The Minimal Supersymmetric Standard Model *162*
9.4.1 The Gauge Group and Particle Content *162*
9.4.2 The Superpotential and Supersymmetry-Breaking Lagrangian *164*
9.4.3 Spontaneous Symmetry-Breaking *164*
9.4.4 MSSM Scalar Potential: UFB Directions and CCB Mminima *165*
9.4.5 The Constrained Minimal Supersymmetric Standard Model *167*
9.5 Mass Matrices in the MSSM *168*
9.5.1 Gaugino Mass Matrices *168*
9.5.1.1 The Chargino Mass Matrix *168*
9.5.1.2 The Neutralino Mass Matrix *169*
9.5.2 Higgs Boson Mass Matrices *170*
9.5.2.1 Neutral Higgs Mass Matrix *170*
9.5.2.2 Charged Higgs Mass Matrix *172*
9.5.3 Fermion Mass Matrices *172*
9.5.3.1 Charged Lepton Mass Matrix *172*
9.5.3.2 Quark Mass Matrices *173*
9.5.4 Sfermion Mass Matrices *174*
9.5.4.1 Slepton Mass Matrices *174*
9.5.4.2 Sneutrino Mass Matrices *175*
9.5.4.3 Squark Mass Matrices *175*
9.6 Couplings in the MSSM *176*
9.6.1 Charged Current Couplings as an Example *176*
9.6.2 Other Couplings *179*
9.7 Coupling Constant Unification *179*
9.8 Experimental Constraints on the MSSM *180*
9.9 Summary *180*
9.10 Problems for Chapter 9 *182*

10 Spontaneous R-Parity Violation *183*
10.1 Introduction *183*
10.2 A Viable Spontaneous R-Parity-Breaking Model *184*
10.3 Symmetry-Breaking *186*

10.3.1 Tree-Level Breaking *187*
10.3.2 Radiative Symmetry-Breaking *188*
10.4 Main Features of the Model *189*
10.4.1 Chargino Mass Matrix *190*
10.4.2 Neutralino Mass Matrix *190*
10.4.3 Charged-Current Couplings *191*
10.4.4 Neutral Current Couplings *191*
10.5 Implications for the Electroweak Breaking Sector *192*
10.5.1 Higgs Spectrum *192*
10.5.2 Higgs Boson Production *193*
10.5.3 CP-Even Higgs Boson Decays *195*
10.5.4 CP-Odd Higgs Boson Decays *196*
10.6 Summary *197*
10.7 Problems for Chapter 10 *198*

11 Bilinear R-Parity Violation *199*
11.1 The Model *199*
11.2 The Scalar Potential *200*
11.3 Mass Matrices in the BRpV Model *201*
11.3.1 Chargino Mass Matrix *202*
11.3.2 Neutralino Mass Matrix *203*
11.4 Couplings in the BRpV Model *203*
11.4.1 Charged Current Couplings *204*
11.5 Neutrino Masses and Mixings in the BRpV Model *205*
11.5.1 Tree-Level Structure *205*
11.5.2 One-Loop Neutrino Masses and Mixings *206*
11.5.2.1 Definition *206*
11.5.2.2 Relevant Diagrams *206*
11.5.2.3 Gauge Invariance *207*
11.5.3 The One-Loop Mass Matrix *208*
11.6 Neutrino Properties and BRpV Parameters *208*
11.6.1 The Atmospheric Neutrino Sector *208*
11.6.2 The Solar Neutrino Sector *210*
11.6.3 Constraining the BRpV Parameters *211*
11.7 Approximate Formulae for the Neutrino Masses and Mixings *211*
11.7.1 Approximate Rotation Matrices *212*
11.7.2 Approximate Coupling Expressions *214*
11.7.3 Relevant Topologies *214*
11.7.4 The Solar Mass Scale *216*
11.7.5 The Solar Mixing Angle *217*
11.8 Summary *219*
11.9 Problems for Chapter 11 *219*

12 Phenomenology of Bilinear R-Parity Violation *221*
12.1 LSP Production *221*
12.2 LSP Decays *223*
12.2.1 LSP Decay Length and Displaced Vertices *223*
12.2.2 LSP Decay Modes *223*
12.3 Probing Neutrino Mixing via Neutralino Decays *226*
12.4 Other LSP Scenarios *230*
12.4.1 Stau as Lightest Supersymmetric Particle *230*
12.4.2 Stop as Lightest Supersymmetric Particle *233*
12.5 Summary *234*
12.6 Problems for Chapter 12 *234*

13 Neutrino Masses and Left–Right Symmetry *237*
13.1 Preliminaries: $SU(3)_c \otimes SU(2)_L \otimes SU(2)_R \otimes U(1)$ Symmetry *237*
13.2 'Standard' $SU(3)_c \otimes SU(2)_L \otimes SU(2)_R \otimes U(1)$ Symmetric Seesaw *239*
13.3 Low-Scale $SU(3)_c \otimes SU(2)_L \otimes SU(2)_R \otimes U(1)$ Seesaw Mechanisms *241*
13.4 Experimental Constraints *242*
13.5 Direct Searches for the Messengers of Neutrino Mass *243*
13.6 Summary *246*
13.7 Problems for Chapter 13 *247*

14 Neutrino Masses and Unification *249*
14.1 Preliminaries: Unification in SU(5) *249*
14.2 Neutrinos in SU(5) *252*
14.3 Neutrinos in SO(10) *254*
14.4 Low-Scales in SO(10) Models: Intermediate Gauge Symmetries *256*
14.4.1 Model Class-I: One Intermediate Left–Right Scale *257*
14.4.2 Model Class-II: Additional Intermediate Pati–Salam Scale *258*
14.4.3 Models with an Intermediate $U(1)_R \times U(1)_{B-L}$ Scale *259*
14.5 Neutrino Seesaw in Low-Scale SO(10) model *259*
14.6 Non Supersymmetric Low-Scale Models *263*
14.7 Summary *263*
14.8 Problems for Chapter 14 *264*

15 Lepton Flavour Violation *265*
15.1 Charged Lepton Flavour Violation *265*
15.1.1 Lepton-Flavour-Violating Muon Decays *265*
15.1.2 $\mu - e$ Conversion in Nuclei *268*
15.2 Models for Charged Lepton Flavour Violation *269*
15.2.1 Low-Scale Seesaw Models *269*
15.2.2 High-Scale Seesaw Models *271*
15.2.2.1 Supersymmetric Type I Seesaw *272*
15.2.2.2 Supersymmetric Type II Seesaw *274*
15.2.3 Lepton Flavour Violation at the High-Energy Frontier *275*
15.2.3.1 Lepton Flavour Violation in Slepton Decays *276*

15.2.3.2 Slepton Mass Splittings *278*
15.2.3.3 Lepton Flavour Violation in the Decays of Right-Handed Neutrinos *279*
15.3 Summary and Prospects *281*
15.4 Problems for Chapter 15 *281*

16 The Flavour Problem and the Quest for Family Symmetry *283*
16.1 Preliminaries *283*
16.2 Reference Neutrino Mixing Patterns *285*
16.2.1 Tri-Bimaximal Pattern *285*
16.2.2 Bi-Large Neutrino Mixing Pattern *287*
16.3 Prototype Flavour Model with Tetrahedral Symmetry *289*
16.4 Revamped A_4 Flavour Model: Generating θ_{13} *293*
16.4.1 Minimal Flavon Extension with $\theta_{13} \neq 0$ *293*
16.4.2 Neutrino Oscillation Parameters *294*
16.5 Fermion Masses in a Realistic A_4-Based Standard Model *296*
16.5.1 Quark-Lepton Mass Relation in a Realistic A_4 Extension of the Standard Model *297*
16.5.2 The Charged Lepton–Quark Mass Relation *298*
16.5.3 Quark Mixing: The CKM Matrix *299*
16.5.4 Neutrino Masses and Mixing *300*
16.6 Quarks, Non-Abelian Discrete Flavour Symmetries and Unification *302*
16.7 Summary and Prospects *303*
16.8 Problems for Chapter 16 *304*

17 Cosmological Implications of Neutrino Masses *307*
17.1 The very Beginning: Inflation and Primordial Density Perturbations *307*
17.2 The Cosmic Microwave Background *309*
17.3 Neutrino Cosmology for Pedestrians *310*
17.3.1 Neutrino Decoupling *311*
17.3.2 The Cosmic Neutrino Background *313*
17.3.3 Primordial Big Bang Nucleosynthesis *314*
17.4 Dark Matter in the Universe *315*
17.4.1 Evidence for Dark Matter in the Universe *316*
17.4.2 Dark Matter and Large-Scale Structure in the Universe *319*
17.5 Dark Matter Detection *320*
17.6 Neutrino Mass Generation and Dark Matter Candidates *323*
17.6.1 Massive Neutrinos as Dark Matter? *324*
17.6.2 WIMP Dark Matter as Neutrino Mass Messenger *324*
17.6.2.1 The Particle Content *325*
17.6.2.2 Yukawa Interactions and Fermion Masses *326*
17.6.2.3 Radiative Seesaw Neutrino Masses *328*
17.6.2.4 Fermionic Dark Matter in Radiative Seesaw Scheme *328*

17.6.3 WIMP Dark Matter Stabilized by Flavour Symmetry *332*
17.6.4 Supersymmetric WIMP Dark Matter *334*
17.6.5 Majoron as Decaying Dark Matter *336*
17.6.6 Decaying Gravitino as Dark Matter *338*
17.7 Summary *339*
17.8 Problems for Chapter 17 *340*

A Notation and Conventions *341*
A.1 Special Relativity and Dirac Matrices *341*
A.2 Two-Component Spinor Notation *342*
A.3 Relating Two-Component and Four-Component Spinors *344*

B Feynman Rules for Majorana Fermions *347*
B.1 Feynman Rules *347*
B.1.1 External Fermions *348*
B.1.2 Propagators *349*
B.1.3 Couplings *350*
B.2 A Simple Example *352*

C Feynman Rules for the Standard Model *355*
C.1 Introduction *355*
C.2 The Complete Standard Model Lagrangian *355*
C.2.1 The Gauge Field Lagrangian *355*
C.2.2 The Fermion Fields Lagrangian *355*
C.2.3 The Higgs Boson Lagrangian *356*
C.2.4 The Yukawa Lagrangian *356*
C.2.5 The Gauge Fixing Term *356*
C.2.6 The Ghost Lagrangian *357*
C.3 The Feynman Rules for QCD *358*
C.3.1 Propagators *358*
C.3.2 Triple Gauge Interactions *358*
C.3.3 Quartic Gauge Interactions *358*
C.3.4 Fermion Gauge Interactions *359*
C.3.5 Ghost Interactions *359*
C.4 The Feynman Rules for the Electroweak Theory *359*
C.4.1 Propagators *359*
C.4.2 Triple Gauge Interactions *360*
C.4.3 Quartic Gauge Interactions *360*
C.4.4 Charged Current Interaction *361*
C.4.5 Neutral Current Interaction *361*
C.4.6 Fermion–Higgs and Fermion–Goldstone Interactions *362*
C.4.7 Triple Higgs–Gauge and Goldstone–Gauge Interactions *362*
C.4.8 Quartic Higgs–Gauge and Goldstone–Gauge Interactions *364*
C.4.9 Triple Higgs and Goldstone Interactions *366*
C.4.10 Quartic Higgs and Goldstone Interactions *367*

C.4.11 Ghost Propagators *368*
C.4.12 Ghost Gauge Interactions *368*
C.4.13 Ghost Higgs and Ghost Goldstone Interactions *370*

D Minimal Supersymmetric Standard Model Couplings *373*
D.1 Charged Current Couplings *373*
D.2 Neutral Current Couplings *374*
D.3 Scalar Couplings to Fermions *374*

E The Prototype Flavour Group: A_4 *377*

F Mass Matrices and Couplings in the BRpV Model *381*
F.1 Mass Matrices *381*
F.1.1 Charged Scalars *381*
F.1.2 CP-Even Neutral Scalars *383*
F.1.3 CP-Odd Neutral Scalars *384*
F.1.4 Squark Mass Matrices *385*
F.1.5 Chargino and Neutralino Mass Matrices *386*
F.1.6 Quark Mass Matrices *386*
F.2 Couplings *386*
F.2.1 Charged Current Couplings *386*
F.2.2 Neutral Current Couplings *386*
F.2.3 Charged Scalars Couplings to Fermions *387*
F.2.4 Neutral Scalars Couplings to Fermions *387*

G Feynman Diagrams for Dark Matter Annihilation *391*

References *393*
