

Index

a

acoustic emission 53
 asphalt experiment 186
 asymptotes 220–221
 asymptotic burst distribution
 – generic case 40–42
 – nongeneric cases 42–45
 – via random walks 51–53
 – by stepwise load increase 57–59
 avalanches
 – at criticality 141–142
 – as random walks 49–53
 – size 33
 – size distribution 138–142
 – snow 197–199
 – by stepwise load increases 57–61
 average force 13, 28

b

backward condition 36–37, 45
 Basquin exponent 186
 Basquin's law 186
 binomial coefficient 205
 Box-Müller algorithm 224
 breakdown susceptibility 119
 breaking rule 64
 Brownian motion 30, 211–212
 – scaling 30
 bundle strength 11
 – local load sharing model, upper
 bound 82
 – soft clamp model 110
 burst avalanches 32
 – equal-load-sharing model 14
 burst distribution 138
 – asymptotics 41, 53
 – at criticality 141–142
 – equal load sharing model 33–40

 – local load sharing model 90–93, 99
 bursts
 – average size 38–40
 – backward condition 34, 36–37
 – forward condition 34–36
 – size 27
 – by stepwise load increase 57
 – total number 37–38

c

central limit theorem 211, 215–216
 change of variable 213–214
 chaos theory 115
 characteristic function 214–215
 clamp
 – rigid 12, 63, 137
 – soft 12, 63, 107
 – stiff 63
 combinatorial theorems 204–206
 – restricted distribution 205–206
 – selection theorems 204–205
 compressive loading 195
 computational physics 6
 conjugate gradient algorithm 226
 coordinate transformation 223
 corrosion 2
 Cox shear lag model 8
 creep 169
 – damage accumulation 180–181
 – deformation rate 175
 – exponent 178
 – failure 175–183
 – healing 182–183
 – model 176–183
 – time evolution 181–182
 critical dynamics 119–135
 – amplitude ratio 135
 – critical relaxation 124

critical dynamics (*contd.*)
 – critical slowing down 120
 – general threshold distribution 124–125
 – susceptibility 119
 critical force 17
 critical indices 115
 critical phenomena 6, 115
 critical point 18
 – breakdown 18
 critical stress 18
 crossover phenomenon 138–152
 – uniform distribution 140
 cumulants, statistical 215
 cumulative distribution function
 11, 213

d

da Vinci, Leonardo 4
 damage accumulation 180–181
 Daniels, Henry 11, 15–16
 dense matrix 226
 density function 11
 dynamical systems theory 115

e

earth quakes 144–146
 elastic constant 11, 13, 22, 28
 elastic medium anchoring 107–114
 elastic–plastic model 25–26
 elasticity
 – linear 12
 electromechanical systems 194–195
 energy emission bursts 159–166
 energy release 53–57, 142
 – at high energies 55
 – at low energies 55–57
 equal load sharing model 11–12
 – burst distribution 37
 – forward bursts 47–48
 – asymptotic burst distribution 40–42
 – failure prediction 137
 – hole size distribution 79–80
 – inclusive bursts 45–46
 – as mean field model 11
 – recursive dynamics 116
 explosive decompression 2
 extreme statistics 218–221
 extreme value distributions 218–221

f

failure mechanisms 85–86
 failure time
 – low noise 189–190
 fast Fourier transforms 226

fatigue 2, 169, 186–188
 – Basquin's law 186
 – cyclic loading 186
 – experiment 186–188
 – failure 186
 fiber mixtures 22–24
 fiber reinforced composites 8, 170, 171
 fiber strengths 11, 13
 – strictly uniform distribution 16
 – uniform distribution 13, 18
 – Weibull distribution 18
 fibers with internal structure 171
 first asymptote 219
 fluctuations 4, 27–61
 force
 – average 17
 – macroscopic 17
 force fluctuations 28–29
 – range 28–29
 force-controlled experiment 12–15,
 152–154
 forward bursts 47–48
 Fourier acceleration 225–227
 fracture front propagation 112–114
 fuse model 6, 148–152
 – burst distribution 150
 – crossover 151
 – current-voltage relation 149

g

γ model 105–106
 Galilei, Galileo 4
 Gaussian distribution 215
 Gaussian numbers 224–225
 glacier flow 175
 global load sharing model 11
 Green function 108
 Gumbel, Emil Julius 73–74
 Gumbel distribution 219
 Gutenberg, Beno 147–148
 Gutenberg–Richter law 144–145, 147

h

Hedgepeth model 8
 history dependency 66
 hole size distribution 78–79
 – equal load sharing model 79–80
 – local load sharing model 80–82

i

inclusive bursts
 – equal load sharing model 45–46
 – local load sharing model 92
 – infinite disorder limit 75–76

intergranular failure 195
 intermediate load sharing models
 104–106
 intragranular failure 195
 invasion percolation 95
 iterated maps 115

I

Lagrange's inversion theorem 203–204
 landslide 199
 – model 200
 – shallow landslides 199–201
 – triggering 200
 least monotonic function (LMF) 14
 Liberty ships 2
 linear elastic fracture mechanics (LEFM) 1
 load 11
 – redistribution 11
 load curve 13
 – generic case 30
 – generic form 21
 – with no maximum 21
 – with non-parabolic maximum 21
 – with several parabolic maxima 21
 – uniform distribution 20
 – Weibull distribution 20
 – work hardening 171
 local load sharing model 12, 63
 – bundle strength 68–69
 – competing failure mechanisms 85–86
 – failure of first and second fiber 69–78
 – failure sequence 67–68
 – force and elongation characteristics
 88–90
 – hole size distribution 78–82
 – localization 76–78
 – in one dimension 65
 – redistribution of forces 66–67
 – two dimensions 93–101
 three and four dimensions 100–101
 localization 76–78, 80–82, 94–95
 – soft clamp model 109–110

m

macroscopic force 17
 Mariotte, Edme 4
 maximum bundle strength 30–32
 maximum force 17
 mean field theory 115
 mechanical energy in fiber 53
 mixed-mode model 106
 models 3–4
 – hierarchical approach 3–4
 moments, statistical 214

n

nanopillars 194–195
 noise
 – lifetime 191
 – waiting time 192
 noise-induced failure 190–194
 non-hookean forces 24–26
 nonlinear dynamics 115, 117

o

Occam's razor 4
 order statistics 71, 216–217
 – averages 217
 – joint probabilities 217–221

p

Peirce, Fredrick Thomas 5
 pillar model 8, 195
 Poisson process 34
 Poisson ratio 109
 porous rocks 195
 postcritical relaxation
 – uniform distribution 126–128
 – Weibull distribution 129–130
 precritical relaxation
 – uniform distribution 131–133
 – Weibull distribution 133–134
 predicting failure 137–168
 – via breaking rate 155
 – burst size divergence 152
 – via energy emission 159–166

q

quasistatic loading 67

r

random numbers
 – Gaussian numbers 224–225
 – generation 223–225
 random slacks 24–25
 random walk 206–208
 – asymmetrical 209–211
 – biased 206–208
 – Brownian motion 211–212
 – gambler's ruin 207–208
 – probability of no return 206–207
 – Wiener process 211
 recursive dynamics 115
 – critical dynamics 119–135
 – fixed points 116–119
 – linearly increasing distribution 120
 – order parameter 119, 123
 – postcritical relaxation 125–130
 – precritical relaxation 131–134

recursive dynamics (*contd.*)
 – uniform distribution 118
 – universal amplitude ratio 134–135
 – universal critical behavior 120–125
 – Weibull distribution 129
 relaxation time 154
 repeated damage 171–174
 – complete failure 174–175
 Richter, Charles 146–148
 Richter's scale 147
 roots 199, 201

S

sandpile model 200
 second asymptote 221
 shallow landslides 199–201
 slab snow avalanches 197–199
 snow avalanches 197–199
 – sintering 198
 soft clamp model 107, 225
 soft membrane model 101–104
 spatial correlations 11, 115
 stochastic variable 213–216
 strain hardening 169
 strain-controlled experiment 13
 stress 13
 support 11
 – elastic medium 12
 – non-rigid 12
 – rigid 11
 – soft 12
 susceptibility 154

t

theory of elasticity 1
 thermally induced failure 188–190
 three extreme value asymptotes 218–221
 thresholds 13
 – strictly uniform distribution 16
 – uniform distribution 13
 – Weibull distribution 18

u

uniform threshold distribution 18
 upper critical dimension 99–101

v

viscoelastic creep 169, 183–186

w

weak layer 197
 weakest link of a chain 221
 Weibull, Waloddi 19–20
 Weibull distribution 19, 221
 Weibull index 18
 work hardening 169–175
 – load curve 171
 – plateau value 174
 – repeated damage 171–174

y

Young modulus 109
