

## Index

### a

Abbé sine condition 28, 29  
 absorptance 23  
 – negative 92  
 – of semiconductors 24  
 absorption coefficient 70, 88  
 – measurement 92  
 – negative 91  
 absorption, transient 238  
 acceptors 53  
 air mass 26  
 AM0 spectrum 26, 27, 191, 206  
 AM1 spectrum 26  
 AM1.5 spectrum 26, 27, 264  
 ambipolar diffusion 116  
 amplification of light 91  
 antireflection coating 14, 177  
 Auger recombination  
 – *see* recombination  
 – – Auger 75

### b

battery 61, 154, 158, 201  
 black body 11, 20  
 – radiation 11  
 bleaching 238, 239  
 Boltzmann constant 263  
 Bose–Einstein distribution 12

### c

carbon dioxide 4  
 – atmospheric concentration 6  
 Carnot efficiency 99  
 Carnot engine 33–35, 39, 41  
 cavity 11, 41  
 characterisation 213, 220  
 chemical energy 95  
 chemical equilibrium 60

chemical potential  
 – electrons 106  
 – photons 90  
 collision time 107  
 concentration of radiation 28, 31  
 concentrator 32  
 concentrator cells 194  
 conduction band 44, 51  
 – germanium 46  
 conductivity 107  
 coupled equilibria 61  
 current–voltage characteristic  
 – for impurity recombination 143  
 – pn-junction 140, 142, 143

### d

Dember effect 117  
 density of states  
 – combined 66  
 – effective 48  
 – for electrons 45  
 – for photons 14, 15, 88  
 detailed balance 71, 72, 78  
 dielectric relaxation 115  
 diffusion current 107  
 diffusion equation 223  
 diffusion length 113, 138, 225  
 diffusion voltage 134  
 direct transitions 65  
 distribution function  
 – for electrons 43  
 – for photons 12  
 donors 52  
 doping  
 – *see* semiconductors, doping 52  
 down-conversion of photons 208  
 drift velocity 107  
 dye solar cell 131

**e**

Earth  
 – energy emission 7  
 – temperature 6, 7, 9  
 effective mass 45, 47  
 efficiency  
 – as function of energy gap 174  
 – intensity dependence 186  
 – maximum 32, 34, 98  
 – monochromatic 102  
 – overall 102  
 Einstein relation 108  
 electric field in a solar cell 154  
 electrochemical equilibrium  
 – in pn-junction 133  
 electrochemical potential 59, 61  
 – of electrons 63  
 – of holes 63  
 electroluminescence 223  
 electron affinity 149  
 electron capture 77  
 – cross-section 77, 78, 81, 83  
 electron emission 78  
 electron mass 263  
 electron–hole pairs  
 – average energy 95  
 – chemical energy 96, 97  
 – equilibrium with photons 99  
 – generation 69, 70, 85, 87, 90  
 – interaction with photons 91  
 – momentum 65  
 – recombination 87  
 – – see recombination 71  
 – temperature 95  
 elementary charge 263  
 emission of photons 88  
 – spontaneous 88  
 – stimulated 88  
 emissivity 23, 89  
 emittance 90  
 energy  
 – consumption 2, 3, 5  
 – current from Sun 2  
 – density 15  
 – dissipation 110  
 – economy 1  
 – maximum reserves 4  
 – of radiation 16  
 – reserves 2, 3, 5  
 – units 2, 263  
 energy current 21  
 – per solid angle 17  
 energy–momentum relation 65, 66

entropy 35, 37  
 – discharge from solar cell 156  
 – of electrons 62  
 – of holes 62  
 – of photons 99  
 equilibrium  
 – see thermodynamic equilibrium 60  
 equivalent circuit 183  
 exciton 160  
 – dissociation 161  
 extraction of charge carriers 240

**f**

Fermi distribution 43  
 – Boltzmann approximation 74  
 Fermi energy 62, 64  
 Fick's law 108  
 field current 106  
 fill factor 173, 185, 186  
*f*-number 31, 32  
 focusing 28  
 free energy 61

**g**

gallium arsenide 47, 54, 148  
 generation rate 70  
 geometrical optics 30  
 greenhouse effect 6–8

**h**

hetero-junction 148, 153, 182  
 holes 49  
 homo-junction 148  
 hot electrons 200

**i**

impact ionization 70, 197  
 impedance spectroscopy 241  
 impurity photovoltaic effect 203  
 impurity states 78  
 index of refraction 29, 211  
 – silicon 178  
 indirect transitions 67

**k**

Kirchhoff's law 22

**l**

Lambert's law 21  
 Landsberg efficiency 36, 38  
 laser 91  
 laser condition 92  
 LED 167
