Foreword *XXIII*

1	Introduction	<i>1</i>
	<i>Philippe Grelu</i>	
	References	<i>8</i>
2	Temporal Cavity Solitons in Kerr Media	<i>11</i>
	<i>Stéphane Coen and Miro Erkintalo</i>	
2.1	Introduction	<i>11</i>
2.2	Mean-Field Equation of Coherently Driven Passive Kerr Resonators	<i>13</i>
2.3	Steady-State Solutions of the Mean-Field Equation	<i>15</i>
2.4	Existence and Characteristics of One-Dimensional Kerr Cavity Solitons	<i>18</i>
2.5	Original Experimental Observation of Temporal Kerr Cavity Solitons	<i>21</i>
2.6	Interactions of Temporal CSs	<i>25</i>
2.7	Breathing Temporal CSs	<i>29</i>
2.8	Emission of Dispersive Waves by Temporal CSs	<i>31</i>
2.9	Conclusion	<i>34</i>
	References	<i>34</i>
3	Dynamics and Interaction of Laser Cavity Solitons in Broad-Area Semiconductor Lasers	<i>41</i>
	<i>Thorsten Ackemann, Jesus Jimenez, Yoann Noblet, Neal Radwell, Guangyu Ren, Pavel V. Paulau, Craig McIntyre, Gian-Luca Oppo, Joshua P. Toomey, and Deborah M. Kane</i>	
3.1	Introduction	<i>41</i>
3.2	Devices and Setup	<i>43</i>
3.2.1	Devices	<i>43</i>
3.2.2	Experimental Setup	<i>44</i>
3.3	Basic Observations and Dispersive Optical Bistability	<i>45</i>

3.3.1	Basic Observation of Spatial Solitons	45
3.3.2	Interpretation as Dispersive Optical Bistability	47
3.3.3	Comparison to Absorptive Case	49
3.4	Modelling of LS and Theoretical Expectations in Homogenous System	50
3.4.1	Model Equations	50
3.4.2	Interaction of Laser Solitons in a Homogenous System	52
3.5	Phase and Frequency Locking of Trapped Laser Cavity Solitons	54
3.5.1	Basic Observation	54
3.5.2	Experiments on Locking Phase	55
3.5.3	Adler Locking: Theory	59
3.6	Dynamics of Single Solitons	60
3.6.1	Transient Dynamics	62
3.6.2	Outlook on Asymptotic Dynamics	65
3.7	Summary and Outlook	68
	Acknowledgments	70
	References	70
4	Localized States in Semiconductor Microcavities, from Transverse to Longitudinal Structures and Delayed Systems	77
	<i>Stéphane Barland, Massimo Guidici, Julien Javaloyes, and Giovanna Tissoni</i>	
4.1	Introduction	77
4.2	Lasing Localized States	80
4.2.1	Transverse Localized States in Coupled Microcavities	80
4.2.2	Time-Localized Structures in Passive Mode-Locked Semiconductor Laser	82
4.3	Localized States in Nonlinear Element with Delayed Retroaction	87
4.3.1	Front Pinning in Bistable System with Delay	88
4.3.2	Topological Dissipative Solitons in Excitable System with Delay	92
4.4	Conclusion and Outlook	98
	Acknowledgements	99
	References	99
5	Dynamics of Dissipative Solitons in Presence of Inhomogeneities and Drift	107
	<i>Pedro Parra-Rivas, Damià Gomila, Lendert Gelens, Manuel A. Matías, and Pere Colet</i>	
5.1	Introduction	107
5.2	General Theory: Swift–Hohenberg Equation with Inhomogeneities and Drift	108
5.3	Excitability Regimes	113
5.4	Fiber Cavities and Microresonators: The Lugiato–Lefever model	116

5.5	Periodically Pumped Ring Cavities	119
5.6	Effects of Drift in a Periodically Pumped Ring Cavity	120
5.7	Summary	125
	Acknowledgments	125
	References	125
6	Dissipative Kerr Solitons in Optical Microresonators	129
	<i>Tobias Herr, Michael L. Gorodetsky, and Tobias J. Kippenberg</i>	
6.1	Introduction to Optical Microresonator Kerr-Frequency Combs	129
6.2	Resonator Platforms	131
6.2.1	Ultra High-Q (MgF_2) Crystalline Microresonators	131
6.2.2	Integrated Photonic Chip Microring Resonators	132
6.3	Physics of the Kerr-comb Formation Process	132
6.3.1	Nonlinear Coupled Mode Equations	135
6.3.2	Degenerate Hyperparametric Oscillations	138
6.3.3	Primary Sidebands	140
6.4	Dissipative Kerr Solitons in Optical Microresonators	141
6.4.1	Analytical Theory of Dissipative Kerr Solitons	141
6.5	Signatures of Dissipative Kerr Soliton Formation in Crystalline Resonators	145
6.6	Laser Tuning into the Dissipative Kerr Soliton States	147
6.7	Simulating Soliton Formation in Microresonators	148
6.8	Characterization of Temporal Dissipative Solitons in Crystalline Microresonators	149
6.9	Resonator Mode Structure and Soliton Formation	151
6.10	Using Dissipative Kerr solitons to Count the Cycles of Light	152
6.11	Temporal Solitons and Soliton-Induced Cherenkov Radiation in an Si_3N_4 Photonic Chip	155
6.12	Summary	157
	References	158
7	Dynamical Regimes in Kerr Optical Frequency Combs: Theory and Experiments	163
	<i>Aurélien Coillet, Nan Yu, Curtis R. Menyuk, and Yanne K. Chembo</i>	
7.1	Introduction	163
7.2	The System	164
7.3	The Models	166
7.3.1	Modal Expansion Model	166
7.3.2	Spatiotemporal Model	167
7.3.3	Stability Analysis	168
7.4	Dynamical States	171
7.4.1	Primary Combs	171
7.4.2	Solitons	176
7.4.3	Chaos	179

7.5	Conclusion	183
7.6	Acknowledgments	184
	References	184
8	Nonlinear Effects in Microfibers and Microcoil Resonators	189
	<i>Muhammad I. M. Abdul Khudus, Rand Ismaeel, Gilberto Brambilla, Neil G. R. Broderick, and Timothy Lee</i>	
8.1	Introduction	189
8.2	Linear Optical Properties of Optical Microfibers	191
8.3	Linear Properties of Optical Microcoil Resonators	193
8.4	Bistability in Nonlinear Optical Microcoil Resonators	195
8.4.1	Broken Microcoil Resonators	197
8.4.2	Polarization Effects in Nonlinear Optical Microcoil Resonators	198
8.4.3	Possible Experimental Verification	199
8.5	Harmonic Generation in Optical Microfibers and Microloop Resonators	200
8.5.1	Mathematical Modeling and Efficiency of Third Harmonic Generation	201
8.5.2	Third Harmonic Generation in Microloop Resonators	204
8.5.3	Second-Harmonic Generation	208
8.6	Conclusions and Outlook	209
	References	209
9	Harmonic Laser Mode-Locking Based on Nonlinear Microresonators	213
	<i>Alessia Pasquazi, Marco Peccianti, David J. Moss, Sai Tac Chu, Brent E. Little, and Roberto Morandotti</i>	
9.1	Introduction	213
9.2	Modeling	215
9.3	Experiments	219
9.3.1	Short Cavity, Unstable Laser Oscillation	223
9.3.2	Short Cavity, Stable Laser Oscillation	224
9.3.3	Short Cavity, Dual-Line Laser Oscillation	226
9.4	Conclusions	228
	References	229
10	Collective Dissipative Soliton Dynamics in Passively Mode-Locked Fiber Lasers	231
	<i>François Sanchez, Andrey Komarov, Philippe Grelu, Mohamed Salhi, Konstantin Komarov, and Hervé Leblond</i>	
10.1	Introduction	231
10.1.1	Dissipative Solitons and Mode-Locked Lasers	231
10.1.2	Multiple Pulses and Their Interactions	232
10.2	Multistability and Hysteresis Phenomena	234
10.2.1	Multiple Pulsing	234

10.2.2	Multistability Observations	235
10.2.3	Modeling Multiple Pulsing and Hysteresis	236
10.3	Soliton Crystals	238
10.3.1	From Soliton Molecules to Soliton Crystals	238
10.3.2	Soliton Crystal Experiments	239
10.3.3	Modeling Soliton Crystal Formations	240
10.3.4	Soliton Crystal Instability	243
10.4	Toward the Control of Harmonic Mode-Locking by Optical Injection	244
10.5	Complex Soliton Dynamics	247
10.5.1	Unfolding Complexity	247
10.5.2	Analogy Between Soliton Patterns and the States of Matter	247
10.5.3	Soliton Rain Dynamics	250
10.5.4	Chaotic Pulse Bunches	252
10.6	Summary	256
	Acknowledgments	257
	References	257
11	Exploding Solitons and Rogue Waves in Optical Cavities	263
	<i>Wonkeun Chang and Nail Akhmediev</i>	
11.1	Introduction	263
11.2	Passively Mode-Locked Laser Model	266
11.3	The Results of Numerical Simulations	268
11.4	Probability Density Function	270
11.5	Conclusions	272
11.6	Acknowledgements	272
	References	273
12	SRS-Driven Evolution of Dissipative Solitons in Fiber Lasers	277
	<i>Sergey A. Babin, Evgeniy V. Podivilov, Denis S. Kharenko, Anastasia E. Bednyakova, Mikhail P. Fedoruk, Olga V. Shtyrina, Vladimir L. Kalashnikov, and Alexander A. Apolonski</i>	
12.1	Introduction	277
12.2	Generation of Highly Chirped Dissipative Solitons in Fiber Laser Cavity	279
12.2.1	Modeling	279
12.2.1.1	Analytical Solution of CQGLE in the High Chirp Limit	281
12.2.1.2	Comparison of Analytics with Numerics	284
12.2.2	Experiment and its Comparison with Simulation	286
12.2.3	NPE Overdriving and its Influence on Dissipative Solitons	288
12.3	Scaling of Dissipative Solitons in All-Fiber Configuration	290
12.3.1	Different Ways to Increase Pulse Energy, Limiting Factors	290
12.3.2	SRS Threshold for Dissipative Solitons at Cavity Lengthening	292
12.4	SRS-Driven Evolution of Dissipative Solitons in Fiber Laser Cavity	297

12.4.1	NSE-Based Model in Presence of SRS	297
12.4.1.1	Model Details	298
12.4.1.2	Simulation, Comparison with Experiment	299
12.4.2	Generation of Stokes-Shifted Raman Dissipative Solitons	302
12.4.2.1	Proof-of-Principle Experiment	304
12.4.3	Characteristics of Raman dissipative Solitons	306
12.4.3.1	Variation of the Soliton Spectra with Filter Parameters	306
12.4.3.2	Variation of the Soliton Spectra with the Raman Feedback Parameters	307
12.4.4	Generation of Multicolor Soliton Complexes and Their Characteristics	307
12.5	Conclusions and Future Developments	310
