Preface *xiii*

- 1 Introduction: Classical Physics and the Physics of Information Technology 1**
 - 1.1 The Perception of Matter in Classical Physics: Particles and Waves 1
 - 1.2 Axioms of Classical Physics 2
 - 1.3 Status and Effect of Classical Physics by the End of the Nineteenth Century 3
 - 1.4 Physics Background of the High-Tech Era 6
 - 1.5 Developments in Physics Reflected by the Development of Lighting Technology 7
 - 1.5.1 The Light Bulb (Incandescent Lamp) 8
 - 1.5.2 The Fluorescent (Discharge) Lamp 9
 - 1.5.3 Light-Emitting and Laser Diodes 11
 - 1.6 The Demand for Physics in Electrical Engineering and Informatics: Today and Tomorrow 11
 - Summary in Short 12
 - 1.7 Questions and Exercises 13

- 2 Blackbody Radiation: The Physics of the Light Bulb and of the Pyrometer 15**
 - 2.1 Electromagnetic Radiation of Heated Bodies 15
 - 2.2 Electromagnetic Field in Equilibrium with the Walls of a Metal Box 17
 - 2.3 Determination of the Average Energy per Degree of Freedom. Planck's Law 18
 - 2.4 Practical Applications of Planck's Law for the Blackbody Radiation 19
 - 2.5 Significance of Planck's Law for the Physics 21
 - Summary in Short 21
 - 2.6 Questions and Exercises 22

- 3 Photons: The Physics of Lasers 25**
 - 3.1 The Photoelectric Effect 25
 - 3.2 Practical Applications of the Photoelectric Effect (Photocell, Solar Cell, Chemical Analysis) 27

- 3.3 The Compton Effect 28
- 3.4 The Photon Hypothesis of Einstein 29
- 3.5 Planck's Law and the Photons. Stimulated Emission 30
- 3.6 The Laser 31
- Summary in Short 33
- 3.7 Questions and Exercises 34

- 4 Electrons: The Physics of the Discharge Lamps 37**
- 4.1 Fluorescent Lamp 37
- 4.2 Franck–Hertz Experiment 38
- 4.3 Bohr's Model of the Hydrogen Atom: Energy Quantization 40
- 4.4 Practical Consequences of the Energy Quantization for Discharge Lamps 42
- 4.5 The de Broglie Hypothesis 45
- 4.6 The Davisson–Germer Experiment 46
- 4.7 Wave–Particle Dualism of the Electron 47
- Summary in Short 48
- 4.8 Questions and Exercises 48

- 5 The Particle Concept of Quantum Mechanics 51**
- 5.1 Particles and Waves in Classical Physics 51
- 5.2 Double-Slit Experiment with a Single Electron 53
- 5.3 The Born–Jordan Interpretation of the Electron Wave 55
- 5.4 Heisenberg's Uncertainty Principle 55
- 5.5 Particle Concept of Quantum Mechanics 56
- 5.6 The Scale Dependence of Physics 57
- 5.7 Toward a New Physics 58
- 5.8 The Significance of Electron Waves for Electrical Engineering 59
- 5.9 Displaying Electron Waves 60
- Summary in Short 61
- 5.10 Questions and Exercises 61
- Reference 61

- 6 Measurement in Quantum Mechanics. Postulates 1–3 63**
- 6.1 Physical Restrictions for the Wave Function of an Electron 64
- Postulate 1 64
- 6.2 Mathematical Definitions and Laws Related to the Wave Function 65
- 6.3 Mathematical Representation of the Measurement by Operators 66
- Postulate 2 67
- 6.4 Mathematical Definitions and Laws Related to Operators 67
- 6.5 Measurement in Quantum Mechanics 68
- Postulate 3 69
- Summary in Short 72
- 6.6 Questions and Exercises 72

7	Observables in Quantum Mechanics. Postulates 4 and 5. The Relation of Classical and Quantum Mechanics	75
7.1	The Canonical Commutation Relations of Heisenberg Postulate 4	76
7.2	The Choice of Operators by Schrödinger	76
7.3	Vector Operator of the Angular Momentum	77
7.4	Energy Operators and the Schrödinger Equation Postulate 5	78
7.5	Time Evolution of Observables	79
7.6	The Ehrenfest Theorem	81
	Summary in Short	82
7.7	Questions and Exercises	82
8	Quantum Mechanical States	85
8.1	Eigenstates of Position	85
8.2	Eigenstates of Momentum	87
8.3	Eigenstates of Energy – Stationary States	88
8.4	Free Motion	90
8.5	Bound States	92
	Summary in Short	94
8.6	Questions and Exercises	94
9	The Quantum Well: the Basis of Modern Light-Emitting Diodes (LEDs)	97
9.1	Quantum-Well LEDs	97
9.2	Energy Eigenvalues in a Finite Quantum Well	99
9.3	Applications in LEDs and in Detectors	103
9.4	Stationary States in a Finite Quantum Well	103
9.5	The Infinite Quantum Well	104
9.6	Comparison to a Classical Particle in a Box	106
	Summary in Short	107
9.7	Questions and Exercises	107
10	The Tunnel Effect and Its Role in Electronics	109
10.1	The Scanning Tunneling Microscope	109
10.2	Electron at a Potential Barrier	110
10.3	Field Emission, Leakage Currents, Electrical Breakdown, Flash Memories	113
10.4	Resonant Tunneling, Quantum Field Effect Transistor, Quantum-Cascade Lasers	117
10.4.1	Mathematical Demonstration of Resonant Tunneling	119
	Summary in Short	121
10.5	Questions and Exercises	122
11	The Hydrogen Atom. Quantum Numbers. Electron Spin	125
11.1	Eigenstates of L_z	126

11.2	Eigenstates of L^2	126
11.3	Energy Eigenstates of an Electron in the Hydrogen Atom	129
11.4	Angular Momentum of the Electrons. The Spin	134
	Summary in Short	135
11.5	Questions and Exercises	136
12	Quantum Mechanics of Many-Body Systems (Postulates 6 and 7). The Chemical Properties of Atoms. Quantum Information Processing	139
12.1	The Wave Function of a System of Identical Particles	139
	Postulate 6	140
12.2	The Pauli Principle	140
	Postulate 7	140
12.3	Independent Electron Approximation (One-Electron Approximation)	142
12.4	Atoms with Several Electrons	145
12.5	The Chemical Properties of Atoms	145
12.6	The Periodic System of Elements	147
12.7	Significance of the Superposition States for the Future of Electronics and Informatics	148
	Summary in Short	151
12.8	Questions and Exercises	151
	References	152
A	Important Formulas of Classical Physics	153
A.1	Basic Concepts	153
A.1.1	The Point Mass	153
A.1.2	Frame of Reference	153
A.1.3	The Path	153
A.1.4	Kinematics	153
A.2	Newton's Axioms	154
A.3	Conservation Laws	155
A.4	Examples	156
A.4.1	Electrons in a Homogenous Electric Field	156
A.4.2	Harmonic Oscillators	156
A.5	Waves in an Elastic Medium	157
A.6	Wave Optics	159
A.6.1	Diffraction by a Double Slit	159
A.6.2	X-Ray Diffraction by a Crystal Lattice	160
A.7	Equilibrium Energy Distribution among Many Particles	160
A.8	Complementary Variables	162
A.9	Special Relativity Theory	162
B	Important Mathematical Formulas	165
B.1	Numbers	165
B.2	Calculus	166

B.3 Operators 167
B.4 Differential Equations 168
B.5 Vectors and Matrices 169

C List of Abbreviations 171

Solutions 177

List of Figures 189

Index 197
