| | | |
|-----------------------|--|-----------|
| I | Symmetry transformations | 1 |
| A | Basic symmetries | 1 |
| B | Symmetries in classical mechanics | 5 |
| C | Symmetries in quantum mechanics | 26 |
| A_I | Eulerian and Lagrangian points of view in classical mechanics | 31 |
| 1 | Eulerian point of view | 32 |
| 2 | Lagrangian point of view | 34 |
| B_I | Noether's theorem for a classical field | 38 |
| 1 | Lagrangian density and Lagrange equations for continuous variables | 38 |
| 2 | Symmetry transformations and current conservation | 40 |
| 3 | Generalization, relativistic notation | 41 |
| 4 | Local conservation of energy | 42 |
| ***** | | |
| II | Some ideas about group theory | 45 |
| A | General properties of groups | 46 |
| B | Linear representations of a group | 56 |
| A_{II} | Left coset of a subgroup; quotient group | 65 |
| 1 | Left cosets | 65 |
| 2 | Quotient group | 66 |
| ***** | | |
| III | Introduction to continuous groups and Lie groups | 69 |
| A | General properties | 70 |
| B | Examples | 85 |
| C | Galilean and Poincaré groups | 98 |

| | |
|--|------------|
| A_{III} Adjoint representation, Killing form, Casimir operator | 109 |
| 1 Adjoint representation of a Lie algebra | 109 |
| 2 Killing form ; scalaire product and change of basis in \mathcal{L} | 111 |
| 3 Completely antisymmetric structure constants | 113 |
| 4 Casimir operator | 114 |
| IV Induced representations in the state space | 117 |
| A Conditions imposed on the transformations in the state space . . . | 119 |
| B Wigner's theorem | 121 |
| C Transformations of observables | 126 |
| D Linear representations in the state space | 128 |
| E Phase factors and projective representations | 133 |
| A_{IV} Unitary projective representations, with finite dimension, of connected Lie groups. Bargmann's theorem | 141 |
| 1 Case where \mathcal{G} is simply connected | 142 |
| 2 Case where \mathcal{G} is p -connected | 145 |
| B_{IV} Uhlhorn-Wigner theorem | 149 |
| 1 Real space | 149 |
| 2 Complex space | 153 |
| ***** | |
| V Representations of Galilean and Poincaré groups: mass, spin, and energy | 157 |
| A Representations in the state space | 158 |
| B Galilean group | 159 |
| C Poincaré group | 173 |
| A_V Proper Lorentz group and $SL(2C)$ group | 191 |
| 1 Link to the $SL(2, C)$ group | 191 |
| 2 Little group associated with a four-vector | 198 |
| 3 W^2 operator | 202 |
| B_V Commutation relations of spin components, Pauli-Lubanski four-vector | 205 |
| 1 Operator \mathbf{S} | 205 |
| 2 Pauli-Lubanski pseudovector | 207 |
| 3 Energy-momentum eigensubspace with any eigenvalues. | 210 |
| C_V Group of geometric displacements | 213 |
| 1 Brief review: classical properties of displacements | 214 |
| 2 Associated operators in the state space | 223 |

| | |
|--|------------|
| D_V Space reflection (parity) | 233 |
| 1 Action in real space | 233 |
| 2 Associated operator in the state space | 235 |
| 3 Parity conservation | 237 |
| ***** | |
| VI Construction of state spaces and wave equations | 241 |
| A Galilean group, the Schrödinger equation | 242 |
| B Poincaré group, Klein–Gordon, Dirac, and Weyl equations | 254 |
| A_{VI} Relativistic invariance of Dirac equation and non-relativistic limit | 273 |
| 1 Relativistic invariance | 273 |
| 2 Non-relativistic limit of the Dirac equation | 276 |
| B_{VI} Finite Poincaré transformations and Dirac state space | 281 |
| 1 Displacement group | 281 |
| 2 Lorentz transformations | 283 |
| 3 State space and Dirac operators | 287 |
| C_{VI} Lagrangians and conservation laws for wave equations | 293 |
| 1 Complex fields | 293 |
| 2 Schrödinger equation | 295 |
| 3 Klein–Gordon equation | 297 |
| 4 Dirac equation | 300 |
| ***** | |
| VII Rotation group, angular momenta, spinors | 303 |
| A General properties of rotation operators | 304 |
| B Spin 1/2 particule; spinors | 323 |
| C Addition of angular momenta | 329 |
| A_{VII} Rotation of a spin 1/2 and SU(2) matrices | 339 |
| 1 Modification of a spin 1/2 polarization induced by an SU(2) matrix | 340 |
| 2 The transformation is a rotation | 341 |
| 3 Homomorphism | 342 |
| 4 Link with the chapter VII discussion | 344 |
| 5 Link with double-valued representations | 346 |

| | | |
|-------------------------|--|------------|
| B_{VII} | Addition of more than two angular momenta | 347 |
| 1 | Zero total angular momentum; 3-j coefficients | 347 |
| 2 | 6-j Wigner coefficients | 351 |
| ***** | | |
| VIII | Transformation of observables under rotation | 355 |
| A | Scalar and vector operators | 358 |
| B | Tensor operators | 363 |
| C | Wigner–Eckart theorem | 379 |
| D | Applications and examples | 384 |
| A_{VIII} | Short review of classical tensors | 397 |
| 1 | Vectors | 397 |
| 2 | Tensors | 398 |
| 3 | Properties | 401 |
| 4 | Criterion for a tensor | 403 |
| 5 | Symmetric and antisymmetric tensors | 403 |
| 6 | Specific tensors | 404 |
| 7 | Irreducible tensors | 405 |
| B_{VIII} | Second-order tensor operators | 409 |
| 1 | Tensor product of two vector operators | 409 |
| 2 | Cartesian components of the tensor in the general case | 411 |
| C_{VIII} | Multipole moments | 415 |
| 1 | Electric multipole moments | 416 |
| 2 | Magnetic multipole moments | 428 |
| 3 | Multipole moments of a quantum system with a given angular momentum J | 434 |
| D_{VIII} | Density matrix expansion on tensor operators | 439 |
| 1 | Liouville space | 439 |
| 2 | Rotation transformation | 441 |
| 3 | Basis of the $T_Q^{[K]}$ operators | 442 |
| 4 | Rotational invariance in a system's evolution | 444 |
| ***** | | |
| IX | Internal symmetries, SU(2) and SU(3) groups | 449 |
| A | System of distinguishable but equivalent particles | 451 |
| B | SU(2) group and isospin symmetry | 466 |
| C | SU(3) symmetry | 472 |

| | | |
|-----------------------|--|------------|
| A_{IX} | The nature of a particle is equivalent to an internal quantum number | 497 |
| 1 | Partial or complete symmetrization, or antisymmetrization, of a state vector | 497 |
| 2 | Correspondence between the states of two physical systems | 499 |
| 3 | Physical consequences | 501 |
| B_{IX} | Operators changing the symmetry of a state vector by permutation | 503 |
| 1 | Fermions | 503 |
| 2 | Bosons | 506 |
| ***** | | |
| X | Symmetry breaking | 507 |
| A | Magnetism, breaking of rotational symmetry | 508 |
| B | A few other examples | 515 |
| APPENDIX | | 521 |
| | Time reversal | 521 |
| 1 | Time reversal in classical mechanics | 522 |
| 2 | Antilinear and antiunitary operators in quantum mechanics | 527 |
| 3 | Time reversal and antilinearity | 534 |
| 4 | Explicit form of the time reversal operator | 542 |
| 5 | Applications | 546 |
