Preface	<i>xvii</i>
Acknowledgments	<i>xix</i>

Part I Basics 1

1	Introduction	3
1.1	Computational Physics and Science	3
1.2	This Book's Subjects	4
1.3	Video Lecture Supplements	4
1.4	This Book's Codes and Problems	5
1.5	Our Language: The Python Ecosystem	6
1.6	The Easy Way: Python Distributions	6
2	Software Basics	9
2.1	Making Computers Obey	9
2.2	Computer Number Representations	11
2.2.1	IEEE Floating-Point Numbers	12
2.2.1.1	Examples of IEEE Representations	15
2.2.2	Python and the IEEE 754 Standard	17
2.3	Python Mini Tutorial	18
2.3.1	Structure and Functions	18
2.3.2	Variable Types and Operators	19
2.3.3	Boolean and Control Structures	20
2.3.4	Python Lists as Arrays	21
2.3.5	Python I/O	23
2.3.6	Python's Algebraic Tools	24
2.4	Programming Warmup	25
2.4.1	Program Design	26
2.4.2	First Programming Steps	27
2.4.3	Over and Underflow Exercises	28
2.4.4	Machine Precision	29
2.4.5	Experiment: Your Machine's Precision	30
2.5	Python's Visualization Tools	30

2.5.1	Visual (VPython)'s 2D Plots	31
2.5.2	Matplotlib's 2D Plots	32
2.5.3	Matplotlib's 3D Surface Plots	35
2.5.4	Matplotlib's Animations	36
2.6	Plotting Exercises	36
2.7	Code Listings	38
3	Errors and Uncertainties	44
3.1	Types of Errors	44
3.1.1	Courting Disaster: Subtractive Cancellation	46
3.1.2	Subtractive Cancellation Exercises	46
3.1.3	Round-Off Errors	48
3.1.4	Round-Off Error Accumulation	48
3.2	Experimental Error Investigation	49
3.3	Errors with Power Series	52
3.3.1	Implementation and Assessment	53
3.3.2	Error in Specular Reflection	54
3.4	Errors in Bessel Functions	55
3.4.1	Numerical Recursion (Method)	55
3.4.2	Implementation and Assessment: Recursion Relations	57
3.5	Code Listing	58
4	Monte Carlo Simulations	59
4.1	Random Numbers	59
4.1.1	Random Number Generation	60
4.1.2	Computing a Random Sequence	62
4.2	Simulating a Random Walk	63
4.2.1	Random Walk Implementation	64
4.2.2	Random Walks in a Brain	65
4.2.3	Random Protein Folding	67
4.3	Spontaneous Decay	68
4.3.1	Discrete Decay Model	69
4.3.2	The Exponential Decay Approximation	70
4.3.3	Discrete Decay Simulation	70
4.3.4	Decay Implementation and Visualization	71
4.4	Testing and Generating Random Distributions	71
4.5	Code Listings	73
5	Differentiation and Integration	78
5.1	Differentiation Algorithms	78
5.1.1	Forward Difference	78
5.1.2	Central Difference	79
5.2	Extrapolated Difference	80
5.2.1	Second Derivatives	81
5.2.1.1	Assessment	81
5.3	Integration Algorithms	83

5.3.1	Box Counting	83
5.3.2	Trapezoid Rule	84
5.3.3	Simpson's Rule	85
5.3.4	Simple Integration Error Estimates	86
5.3.5	Higher-Order Algorithms	88
5.4	Gaussian Quadrature	89
5.4.1	Mapping Gaussian Points	90
5.4.2	Gaussian Quadrature Derivation \odot	90
5.5	Monte Carlo Integrations	91
5.5.1	Stone Throwing Implementation	92
5.5.2	Integration Error Investigation	93
5.6	Mean Value and N-D Integration	94
5.6.1	10-D MC Error Investigation	95
5.6.2	Implementation: 10-D Monte Carlo Integration	95
5.7	MC Variance Reduction	96
5.8	Importance Sampling and von Neumann Rejection	96
5.9	Code Listings	97
6	Trial-and-Error Searching and Data Fitting	100
6.1	Quantum Bound States I	100
6.2	Bisection Search	101
6.2.1	Bisection Exercises	102
6.3	Newton-Raphson Search	102
6.3.1	Search + Backtracking	104
6.4	Magnetization Search	105
6.5	Data Fitting	107
6.5.1	Lagrange Fitting	109
6.5.2	Cubic Spline Interpolation	109
6.5.3	Cubic Spline Quadrature	111
6.6	Fitting Exponential Decay	112
6.7	Least-Squares Fitting	113
6.7.1	Least-Squares Implementation	114
6.7.2	Linear Quadratic Fit	116
6.7.2.1	Linear Quadratic Fit Assessment	118
6.8	Nonlinear Fit to a Resonance	118
6.9	Code Listings	120
7	Matrix Computing and N-D Searching	123
7.1	Masses on a String and N-D Searching	123
7.2	Matrix Generalities	126
7.3	Matrices in Python	129
7.3.1	Lists as Arrays	129
7.3.2	NumPy Matrices	130
7.3.3	NumPy Linear Algebra Library	134
7.4	Exercise: Tests Before Use	136
7.5	Solution to String Problem	139

7.6	Spin States and Hyperfine Structure	139
7.7	Speeding Up Matrix Computing ☉	141
7.7.1	Vectorization	141
7.7.2	Speedup Exercises	143
7.8	Code Listing	144
8	Differential Equations and Nonlinear Oscillations	147
8.1	Nonlinear Oscillators	147
8.2	ODE Review	149
8.2.1	Order	149
8.2.2	Ordinary and Partial	149
8.2.3	Linear and Nonlinear	150
8.2.4	Initial and Boundary Conditions	150
8.3	Dynamic Form of ODEs	150
8.4	ODE Algorithms	152
8.4.1	Euler's Rule	152
8.4.2	Runge–Kutta Rule	153
8.4.3	Adams-Bashful-Moulton Predictor-Corrector Rule	155
8.4.4	Assessment: rk2 <i>versus</i> rk4 <i>versus</i> rk45	156
8.5	Solution for Nonlinear Oscillations	157
8.5.1	Precision Assessment via E Conservation	158
8.6	Extensions: Nonlinear Resonances, Beats, Friction	159
8.6.1	Friction	159
8.6.2	Resonances and Beats	159
8.6.3	Time-Dependent Forces	160
8.7	Code Listings	161

Part II Data Science 165

9	Fourier Analyses	167
9.1	Fourier Series	167
9.1.1	Sawtooth and Half-Wave Functions	169
9.1.2	Exercises: Fourier Series Summations	170
9.2	Fourier Transforms	170
9.3	Discrete Fourier Transforms	172
9.3.1	Aliasing	174
9.3.2	Assessments	176
9.3.3	Transforming Nonperiodic Functions	178
9.4	Noise Filtering	178
9.4.1	Noise Reduction via Autocorrelation	178
9.4.2	Autocorrelation Function Exercises	181
9.4.3	Filtering with Transforms	181
9.4.4	Digital Filters: Windowed Sinc Filters ☉	183
9.5	Fast Fourier Transform ☉	185
9.5.1	Bit Reversal	187

9.6	FFT Implementation	189
9.7	FFT Assessment	190
9.8	Code Listings	190
10	Wavelet and Principal Components Analysis	193
10.1	Part I: Wavelet Analysis	193
10.2	Wave Packets and Uncertainty Principle	195
10.2.1	Wave Packet Exercise	196
10.3	Short-Time Fourier Transforms	197
10.4	Wavelet Transforms	198
10.4.1	Generating Wavelet Basis Functions	198
10.4.2	Continuous Wavelet Transforms	201
10.5	Discrete Wavelet Transforms \odot	203
10.5.1	Pyramid Scheme \odot	205
10.5.2	Daubechies Wavelets Filters \odot	209
10.5.3	DWT Exercise \odot	212
10.6	Part II: Principal Components Analysis	213
10.6.1	Multi-dimensional Data Space	214
10.6.2	Wonders of the Covariance Matrix	215
10.6.3	Demonstration of Principal Component Analysis	218
10.6.4	PCA Exercises	219
10.7	Code Listings	220
11	Neural Networks and Machine Learning	224
11.1	Part I: Biological and Artificial Neural Networks	225
11.1.1	Artificial Neural Networks	226
11.2	A Simple Neural Network	226
11.2.1	Coding A Neuron	227
11.2.2	Building A Simple Network	227
11.2.3	Training A Simple Network	228
11.2.4	Decreasing the Error	230
11.2.5	Coding and Running A Simple Network	232
11.3	A Graphical Deep Net	232
11.4	Part II: Machine Learning Software	234
11.4.1	TensorFlow Installation and Execution	235
11.5	TensorFlow and SkLearn Examples	235
11.5.1	Preprocessing with Scikit-learn	238
11.5.1.1	Gradient Tape	239
11.5.2	Linear Fit to Hubble's Data	239
11.6	ML Clustering	240
11.6.1	Reading Files with Panda	242
11.6.2	Clustering with Perceptrons	242
11.6.3	Clustering with Stochastic Gradient Descent	243
11.7	Keras: Python's Deep Learning API	244
11.8	Image Processing with OpenCV	244

- 11.8.1 Background Subtraction 246
- 11.9 Explore ML Data Repositories 247
- 11.10 Code Listings 247

- 12 Quantum Computing (G. He, Coauthor) 254**
- 12.1 Dirac Notation in Quantum Mechanics 254
- 12.2 From Bits to Qubits 255
 - 12.2.1 Multiple Qubit States 256
- 12.3 Entangled and Separable States 257
 - 12.3.1 Physics Exercise: Two Entangled Dipoles 258
- 12.4 Logic Gates 260
 - 12.4.1 1-Qubit Gates 261
 - 12.4.2 2-Qubit Gates 262
 - 12.4.3 Entanglement via Gates 263
 - 12.4.4 3-Qubit Gates 264
- 12.5 An Intro to QC Programming 264
 - 12.5.1 Half and Full Adders 269
- 12.6 Accessing the *IBM Quantum Computer* 270
 - 12.6.1 IBM Quantum Composer 270
- 12.7 Qiskit Plus IBM Quantum 272
 - 12.7.1 A Full Adder 274
 - 12.7.2 IBM Quantum Exercises 275
- 12.8 The Quantum Fourier Transform 275
 - 12.8.1 1-Qubit QFT 276
 - 12.8.2 2-Qubit QFT 276
 - 12.8.3 n -Qubit QFT \odot 277
- 12.9 Oracle + Diffuser = Grover's Search Algorithm 278
 - 12.9.1 Grover's Implementation 280
- 12.10 Shor's Factoring \odot 281
- 12.11 Code Listings 284

Part III Applications 289

- 13 ODE Applications; Eigenvalues, Scattering, Trajectories 291**
- 13.1 Quantum Eigenvalues for Arbitrary Potentials 291
 - 13.1.1 Model: Nucleon in a Box 292
- 13.2 Algorithm: ODE Solver + Search 293
 - 13.2.1 Not Recommended: Matchless Searching 294
 - 13.2.2 Numerov Algorithm for Schrödinger ODE \odot 294
 - 13.2.3 Implementation: Eigenvalues via ODE Solver + Bisection Algorithm 295
 - 13.2.4 Explorations 296
- 13.3 Classical Chaotic Scattering 296
 - 13.3.1 Model and Theory 297
 - 13.3.2 Implementation 298
 - 13.3.3 Assessment 299

- 13.4 Projectile Motion with Drag 299
 - 13.4.1 Assessment 300
- 13.5 2- and 3-Body Planetary Orbits 301
 - 13.5.1 Planets via Two of Newton's Laws 301
 - 13.5.2 The Discovery of Neptune 302
- 13.6 Code Listings 303

- 14 Fractals and Statistical Growth Models 307**
 - 14.1 The Sierpiński Gasket 308
 - 14.1.1 Measuring Fractal Dimension 309
 - 14.2 Growing Plants 310
 - 14.2.1 Self-Affine Connection 310
 - 14.2.2 Barnsley's Fern 311
 - 14.2.3 Self-Affine Trees 312
 - 14.3 Ballistic Deposition 312
 - 14.4 Length of British Coastline 313
 - 14.4.1 Box Counting Algorithm 314
 - 14.4.2 Coastline Exercise 315
 - 14.5 Correlated Growth 317
 - 14.6 Diffusion-Limited Aggregation 318
 - 14.6.1 Fractal of DLA or Pollock 319
 - 14.7 Fractals in Bifurcations 320
 - 14.8 Cellular Automata Fractals 320
 - 14.9 Perlin Noise Adds Realism ☉ 321
 - 14.9.1 Ray Tracing Algorithms 323
 - 14.10 Code Listings 324

- 15 Nonlinear Population Dynamics 329**
 - 15.1 The Logistic Map, A Bug Population Model 329
 - 15.1.1 Exploring Map Properties 331
 - 15.1.1.1 Stable Populations 331
 - 15.1.2 Fixed Points 332
 - 15.1.3 Period Doubling, Bifurcations 332
 - 15.1.4 Mapping Implementation 333
 - 15.2 Chaos 333
 - 15.3 Bifurcation Diagrams 333
 - 15.3.1 Bifurcation Diagram Implementation 335
 - 15.3.2 Feigenbaum Constants 335
 - 15.3.3 Other Maps 336
 - 15.4 Measures of Chaos 336
 - 15.4.1 Lyapunov Coefficients ☉ 336
 - 15.4.2 Shannon Entropy 338
 - 15.5 Coupled Predator–Prey Models ☉ 338
 - 15.5.1 Lotka–Volterra Model 339
 - 15.5.2 Predator–Prey Chaos 340
 - 15.5.3 LVM with Prey Limit 342

15.5.4	LVM with Predation Efficiency	342
15.5.5	LVM Implementation and Assessment	343
15.5.6	Two Predators, One Prey	344
15.6	Code Listings	344
16	Nonlinear Dynamics of Continuous Systems	348
16.1	The Chaotic Pendulum	348
16.1.1	Free Pendulum Oscillations	349
16.1.2	Analytic Solution as Elliptic Integrals	349
16.1.3	Free Pendulum Implementation and Test	350
16.2	Phase Space	351
16.3	Chaotic Explorations	354
16.3.1	Phase Space Without Velocities	356
16.3.2	Chaotic Bifurcations	357
16.3.3	Fourier or Wavelet Analysis	357
16.4	Other Chaotic Systems	358
16.4.1	The Double Pendulum	358
16.4.2	Billiards	359
16.4.3	Multiple Scattering Centers	360
16.4.3.1	Hard Disk Scattering	361
16.4.4	Lorenz Attractors	361
16.4.5	van der Pool Oscillator	363
16.4.6	The Duffing Oscillator	363
16.5	Code Listings	364
17	Thermodynamics Simulations and Feynman Path Integrals	365
17.1	An Ising Magnetic Chain	365
17.1.1	Statistical Mechanics	367
17.1.1.1	Analytic Solution	367
17.2	Metropolis Algorithm	368
17.2.1	Metropolis Exercise	369
17.2.2	Equilibration and Thermodynamic Properties	370
17.2.3	Explorations	371
17.3	Fast Equilibration via Wang–Landau Sampling \odot	372
17.3.1	WLS Implementation	373
17.4	Path Integral Quantum Mechanics \odot	374
17.4.1	Bound-State Wave Function	376
17.5	Lattice Path Integration	377
17.5.1	A Time-Saving Trick	380
17.6	Implementation	381
17.6.1	Path Integration Exercise	382
17.6.2	Quantum Bouncer \odot	383
17.6.3	Path Integral Bouncer Exercises	384
17.7	Code Listings	385

18	Molecular Dynamics Simulations	391
18.1	MD <i>Versus</i> Thermodynamics	394
18.2	Initial, Boundary, and Large r Conditions	394
18.3	Verlet Algorithms	396
18.3.1	Implementation and Exercise	397
18.3.2	Analysis	398
18.4	MD for 16 Particles	400
18.5	Code Listing	402
19	General Relativity	408
19.1	Einstein's Field Equations	408
19.1.1	Calculating the Riemann and Ricci Tensors	410
19.1.2	Riemann and Ricci Tensor Problems	410
19.1.3	Event Horizons	411
19.2	Gravitational Deflection of Light	412
19.2.1	Gravitational Lensing	413
19.3	Planetary Orbits in GR Gravity	414
19.3.1	Newton's Potential Corrected	414
19.3.2	Orbit Computation via Energy Conservation	414
19.3.3	Precession of the Perihelion of Mercury	416
19.4	Visualizing Wormholes	418
19.5	Problems	420
19.6	Code Listings	420
20	Integral Equations	425
20.1	Nonlocal Potential Binding	425
20.2	Momentum-Space Schrödinger Equation	425
20.2.1	Integral to Matrix Equations	426
20.2.2	Delta-Shell Potential	428
20.2.3	Wave Function (Exploration)	429
20.3	Scattering in Momentum Space \odot	429
20.3.1	Schrödinger to Lippmann–Schwinger Equation	429
20.3.2	Singular Integral Evaluations	430
20.3.3	Singular Integral Equations to Matrix Equations	431
20.3.4	Solution	432
20.3.5	Exercises	433
20.3.6	Scattering Wave Function (Exploration)	434
20.4	Code Listings	434
Part IV PDE Applications		437
21	PDE Review, Electrostatics and Relaxation	439
21.1	Review	439

21.2	Laplace's Equation	441
21.2.1	Fourier Series Solution	442
21.2.2	Fourier Series as an Algorithm	443
21.3	Finite-Difference Algorithm	444
21.3.1	Relaxation and Overrelaxation	446
21.4	Alternate Capacitor Problems	447
21.4.1	Implementation	449
21.5	Electric Field Visualization	449
21.6	Code Listings	450
22	Heat Flow and Leapfrogging	452
22.1	The Parabolic Heat Equation	452
22.1.1	Solution as Analytic Expansion	453
22.2	Time Stepping (Leapfrog) Algorithm	454
22.2.1	Von Neumann Stability Condition	455
22.2.2	Implementation	456
22.2.3	Assessment and Visualization	456
22.3	Newton's Radiative Cooling	457
22.4	The Crank–Nicolson Algorithm	458
22.4.1	Solution via Tridiagonal Matrix \odot	460
22.4.2	Crank–Nicolson Implementation	461
22.5	Code Listings	462
23	String and Membrane Waves	464
23.1	A Vibrating String's Hyperbolic Wave Equation	464
23.1.1	Solution as Normal-Mode Expansion	465
23.2	Time-Stepping Algorithm	466
23.3	von Neumann Stability Analysis	468
23.3.1	Implementation and Assessment	469
23.4	Beyond The Simple Wave Equation	469
23.4.1	Including Friction	469
23.4.2	Including Variable Tension and Density	470
23.4.3	Waves on Catenary	471
23.4.4	Catenary Assessment	472
23.4.5	Including Nonlinear Terms	473
23.5	Vibrating Membrane (2D Waves)	474
23.6	Analytical Solution	475
23.7	Numerical Solution	476
23.8	Code Listings	478
24	Quantum Wave Packets and EM Waves	480
24.1	Time-Dependent Schrödinger Equation	480
24.2	Split-Time Algorithm	482
24.2.1	Implementation	482
24.2.1.1	Animation	483
24.2.2	Wave Packets in Other Wells	484

- 24.3 Special Schrödinger Algorithm 484
- 24.4 Quantum Chaos 485
 - 24.4.1 Quantum Billiards 486
 - 24.4.2 Three Disks Scattering 487
- 24.5 E&M Waves: Finite Difference Time Domain 488
- 24.6 Maxwell's Equations 488
- 24.7 Split-Time FDTD 489
 - 24.7.1 Implementation and Assessment 491
- 24.8 More E&M Problems 492
 - 24.8.1 Circularly Polarized Waves 492
 - 24.8.2 Wave Plates 493
 - 24.8.3 Algorithm and Exercise 494
 - 24.8.4 Twin Lead Transmission Line 495
- 24.9 Code Listings 496

- 25 Shock and Soliton Waves 501**
 - 25.1 The Continuity and Advection Equations 502
 - 25.2 Shock Waves via Burgers' Equation 503
 - 25.2.1 Lax-Wendroff Algorithm 504
 - 25.2.2 Implementation and Assessment 505
 - 25.3 Including Dispersion 505
 - 25.4 KdeV Solitons 506
 - 25.4.1 Analytic Solution 507
 - 25.4.2 Algorithm 508
 - 25.4.3 Implementation 509
 - 25.4.4 Exploration: Phase Space Solitons and Soliton Crossings 509
 - 25.5 Pendulum Chain Solitons 510
 - 25.5.1 Including Dispersion 511
 - 25.6 Continuum Limit, the Sine-Gordon Equation 512
 - 25.6.1 Analytic Solution 513
 - 25.6.2 Numeric 2D Solitons (Pulsons) 513
 - 25.6.3 Implementation 514
 - 25.7 Code Listings 516

- 26 Fluid Hydrodynamics 518**
 - 26.1 Navier-Stokes Equation 518
 - 26.2 Flow Through Parallel Plates 520
 - 26.3 Navier-Stokes Difference Equation 522
 - 26.3.1 Successive Overrelaxation Algorithm 523
 - 26.4 Vorticity Form of Navier-Stokes Equation 523
 - 26.4.1 Vorticity Difference Equation 525
 - 26.4.2 Beam Boundary Conditions 526
 - 26.5 Assessment and Exploration 527
 - 26.5.1 Explorations 529
 - 26.6 Code Listings 529

27	Finite Element Electrostatics ☉	531
27.1	The Potential of Two Metal Plates	531
27.1.1	Analytic Solution	531
27.2	Finite Element Method	532
27.2.1	Weak Form of PDE	532
27.2.2	Galerkin Spectral Decomposition	533
27.2.3	Solution via Linear Equations	534
27.2.4	Imposing the Boundary Conditions	536
27.3	1D FEM Problems	536
27.4	2D FEM Exercises	537
27.5	Code Listings	539
	Appendix Codes and Animations	543
	References	546
	Index	555
