

Index

a

- Airy equation 18, 34, 41
- Alfvén resonance 10, 12, 17, 41, 133, 137
 - back influence of Alfvén wave to FMS field 146, 153
 - in a dipole magnetosphere 149
 - energy dissipation in the resonance region 19
 - resonance point 13, 16, 87, 89
- Alfvén waves
 - absorption in the ionosphere 213
 - boundary conditions at the ionosphere 120, 128
 - kinetic 41
 - $m \gg 1$
 - excitation by a localised monochromatic source 275
 - excitation by a localised pulse source 282
 - excitation by a stochastic source 241
 - excitation by HF radar 280
 - pulse excitation 253
 - transverse spatial structure 215, 222
 - $m \sim 1$
 - excitation by broadband sources 158
 - excitation by FMS wave packet 161
 - excitation by pulse sources 21, 160
 - excitation by stochastic sources 162
 - oscillation modes
 - poloidal 203
 - toroidal, $m \gg 1$ 203
 - toroidal, $m \sim 1$ 141
 - oscillations field on the ground 130, 226
 - polarisation spectral splitting 204

- transverse dispersion 7, 37
 - due to kinetic effects 349
 - due to the field line curvature 234
- approximation
 - of deep potential well 47
 - of geometrical optics xlii
 - of ideal plasma 16
 - local 301
 - of shallow potential well 47
 - of tangential discontinuity 63
 - of thin layer 231

b

- ballooning instability 316
 - growth rate calculation
 - in a local approximation 306
 - in WKB approximation 309
- Bohr-Sommerfeld quantisation condition 239

c

- causality principle 74
- characteristics (constant phase lines), for Alfvén waves with $m \gg 1$ on the coordinate surfaces $x^3 = \text{const}$ 333
- coordinate surfaces 331
- coordinate system
 - Cartesian
 - for box model 12
 - for tangential discontinuity near the magnetopause 63
 - curvilinear, field line oriented
 - dipole-like 138
 - for near-Earth's geotail 299

- coordinate system (*contd.*)
 - for 3D-inhomogeneous magnetosphere 330, 365
 - cylindrical, for geotail 99
- coupled MHD oscillations 315
 - slow magnetosonic and Alfvén waves 299
 - ballooning instability 316
 - linear transformation in the geotail
 - current sheet 320

d

- damping
 - collisional 4
 - collisionless 5
- dispersion equation
 - for Alfvén waves 2, 7, 8
 - for FMS waves 8
 - in a shear flow 91
 - for magnetosonic waves 2

e

- equations
 - for Alfvén waves with $m \gg 1$ 331
 - for ballooning modes 301
 - of ideal MHD 1
 - linearized 1
 - for MHD-oscillations
 - in a dipole magnetosphere with a cold plasma 148
 - in a non-ideal plasma 39
 - in a 1D-inhomogeneous plasma 15, 16

f

- fast magnetosonic mode 2
 - Cherenkov emission 111, 115
 - decay in the Alfvén resonance region 46
 - energy flux 67
 - reflection coefficient from magnetopause in
 - a dipole magnetosphere model 191
 - reflection from inhomogeneity 13
 - spatial structure in a dipole magnetosphere 151, 178
 - transparent regions in a dipole magnetosphere model 182
 - turning point 13, 17, 153
 - wave packet 21

- field line resonance (Alfvén resonance) 10
- Friedrichs (polar) diagrams 2

g

- geomagnetic pulsations xxxix
 - classification xxxix
 - magic frequencies 185
 - Pc1, high-latitude 62
 - Pc3, dayside 162
 - Pc3, high-latitude 62
 - Pi2 and SSC oscillations 251
 - Pi2, substorm 161, 193
- group velocity xlii
 - of Alfvén waves 2, 8
 - of FMS waves 2
 - of SMS waves 2
 - transverse, of Alfvén waves with $m \gg 1$ 205

h

- Hamilton equations xlii
- hodograph
 - for oscillations in the Alfvén resonance region 18, 35
 - for oscillations in the magnetosonic resonance region 35

i

- instability
 - of global modes, in a cylindrical geotail model 95
 - growth rate xlii
 - of MHD-oscillations xlii

k

- Kelvin-Helmholtz instability 63, 70, 83

l

- linear oscillation theory xlii
- linear transformation
 - of Alfvén and slow magnetosonic waves in the geotail current sheet 320
 - of large-scale Alfvén wave to kinetic Alfvén wave 232
- low-latitude boundary layer (LLBL) 98

m

- Mach cone 111, 115
- magic frequencies 185
- magnetohydrodynamics (MHD) xxxix
- magnetosonic resonance 10, 87
 - in a dipole magnetosphere 164
 - resonance point 31, 32, 87, 89
- MASSA experiment 292, 294
- method
 - contour integral 321
 - Fourier transform 267
 - Green's function 50
 - Laplace transform 235
 - multiple-scale 316
 - saddle point 228–230, 237, 254, 276, 286, 322
- metric tensor 165
- MHD modes
 - guided 2
 - isotropic 2
 - phase shift between their field components 3
- MHD waves xxxix
 - decomposition into potential and vortical components 38
- model
 - of Alfvén speed distribution 188
 - of Alfvén wave generation in MASSA experiment 294
 - of geotail 194
 - with a current sheet 302
 - cylindrical 69, 84, 88, 98, 99
 - of ionosphere
 - with inclined geomagnetic field 120
 - as a thin layer 117
 - of magnetopause in form of tangential discontinuity 68
 - of magnetosphere xl
 - box model 12
 - dipole 138, 147
 - parabolic 196
 - with rotating plasma 164
 - 3D-inhomogeneous 330
 - of plasma filament, cylindrical 56
 - of shear flow 71
 - in form of transition layer 94

- of transition layer
 - in a cold plasma 15
 - in a warm plasma 31
- of white noise source for stochastic oscillations 245
- model equation, for transverse structure of Alfvén waves with $m \gg 1$ 260

n

- near-Earth plasma sheet (NEPS) 189

o

- opaque region 13

p

- plasma equilibrium condition 30, 304
- plasma parameter β 2, xl
- Poynting vector 26

r

- residue theorem 286
- resonance surface
 - poloidal 332
 - toroidal 332
- resonator
 - for FMS waves
 - in the 'box model' 185
 - dipole model, outer magnetosphere 191
 - dipole model, plasmasphere 192
 - in the near-Earth plasma sheet 193, 196
 - for poloidal Alfvén waves near the plasmopause 239

s

- Schrödinger equation 44, 57
- shear flow 70
 - stability 70, 83
 - smooth transition layer 94
 - tangential discontinuity 88
- singular point, bypassing rule 15
- slow magnetosonic mode 2
 - boundary conditions at the ionosphere 120
- stochastic oscillations
 - pair correlators 245
 - polarisation ellipse 357

stochastic oscillations (*contd.*)
 parameters, for Alfvén oscillations with
 $m \gg 1$ 248
 spectral function 351
 white noise source 245

t

tangential discontinuity, matching conditions
 66, 90

tensor

of dielectric permeability 7, 25, 38
 of plasma conductivity 26, 118

transparent region 13

for Alfvén waves with $m \gg 1$ 205
 for fast magnetosonic mode in a dipole
 magnetosphere model 182

turning point

ordinary 13, 89, 205, 239
 singular 205, 222, 239, 321

w

wave frequency 2

Doppler-shifted 16
 local xlii

waveguide 43

for FMS waves 44, 52

for quasilongitudinal Alfvén waves 47
 cylindrical 56

for quasi-transverse Alfvén waves 49, 51
 cylindrical 58

WKB approximation 17, 21, 142, 152, 178,
 179, 201, 208
