Build for Tech Change

A Non-technologist's Survival Guide to Technology-led Transformation

Ian Murrin

In a world where technology-led transformation is a top priority for leaders across the globe, *Happy Tech* delves into the challenges and opportunities that come with these ambitious initiatives. Despite the significant investments made--over \$1.5 trillion annually--many transformation efforts fall short of their goals, leading to substantial financial and human costs.

Build for Tech Change explores the stark reality that only a small fraction of companies achieve their transformation objectives, with billions of dollars wasted each year. The book highlights the critical barriers to success, such as defining the right investment priorities and addressing workforce skills and attitudes. It also sheds light on the broader implications of this wastage, including the opportunity costs and the potential to fund global solutions like eradicating hunger.

Through compelling case studies and data-driven insights, *Build for Tech Change* examines the pitfalls of technology-led change programs, from faulty air traffic control systems causing massive disruptions to tragic incidents like the UK's Post Office Horizon accounting system debacle. The book underscores the importance of a well-planned and executed transformation strategy to avoid such failures.

Ultimately, *Build for Tech Change* offers hope and practical guidance for organizations looking to navigate the complexities of digital transformation. It presents a step-by-step approach to reduce the likelihood of failure and emphasizes the value of building for change. Whether you're a technical expert or a business leader, this book provides valuable insights to help you achieve a positive outcome for your digital transformation efforts.

The Soul of Strategy

Building Customer Centric Organizations

Bernard Jaworski

A powerful and original new take on business strategy—with the customer at the center of it—designed to generate enduring competitive advantage

When setting strategy, organizations typically spend too much time thinking about the competition and resources within the firm and not enough time on the customer—the soul of any organization. Such an approach is reflected in the fact that most popular theories of business strategy have focused on resource- and capability-based perspectives of the firm. Real-world businesses embracing and applying these intuitively attractive theories have struggled to compete, however, exactly because those theories fail to adequately account for the most important actor in all commercial transactions: the customer.

In *The Soul of Strategy*, two veteran strategists and academics deliver a straightforward new approach to business strategy—one that builds and expands on the classic work of Peter Drucker—recognizing the inescapable reality, faced by every organization, that a firm's primary job is to create and keep customers.

The book offers a comprehensive customer-centric strategy framework, a set of fresh perspectives and tools, and step-by-step guides to implementing the leadership styles, governance structures, and technology that companies require to outcompete their rivals in attracting and retaining customers. The book brings to life these key principles by using case studies and examples of organizations in a variety of industries. You'll find:

- A clear description of the concept of customer centricity and its value to the organization.
- A new consumer behavior framework that will enable you to ask the right questions to elicit unique, actionable customer insights

[View on Edelweiss](#)

Answers to the business paradox of focusing on serving society and still be prosperous

The Caring Company: How Great Companies Do One Thing Better Than the Rest clearly shows how businesses can choose to serve the common good as #1 priority and still achieve higher performance. Rather than simply transacting with their customers, suppliers, and the local community, this book explains how companies who instead build unconditionally caring relationships with them are rewarded economically for doing so.

Written in a lively narrative style and backed by research from history and economics to psychology and philosophy and by many case studies of contemporary companies that have successfully adopted this new business paradigm, this book also discusses:

- Challenges in accepting and implementing a radically new business paradigm and ways to overcome them
- How to make employees willing to provide unconditional care to customers, suppliers, and the local community
- The origins of capitalistic enterprise, which have surprisingly been about more than just money and the future of capitalism remodeled around the caring companies

The Caring Company: How Great Companies Do One Thing Better Than the Rest is a timely, essential read for managers, executives, business leaders, and entrepreneurs seeking to align their heartset with their mindset and transform their businesses to serve society while achieving greater business success. By doing so, they will reshape the free-market economy for the better.

The New World of Competitiveness

Stephane Garelli

[View on Edelweiss](#)

World Competitiveness is a groundbreaking field that involves managing material, financial, and human resources to enhance a country's prosperity and improve living standards. This book explains the implications of this concept and how it has introduced a new dimension to world economics. Since the late 1960s, the world has been moving towards greater openness, with even the most isolated countries joining the international community through free trade, idea exchange, and unrestricted travel. However, the COVID-19 crisis in 2019 brought about a series of health, economic, and geopolitical crises, fracturing the world economy. As a result, the rules of competitiveness are evolving for both nations and companies. In a volatile global environment marked by disruptive technologies and changing societal values, government and business leaders face significant challenges. This book provides insights on navigating this new landscape.

During his tenure as Managing Director of the World Economic Forum and the annual Davos meetings, Professor Stéphane Garelli observed an increasing focus on "national competitiveness" among business and country leaders. While many equated national competitiveness with corporate competitiveness, Professor Garelli recognized that it also involves improving government policies and developing economic and social infrastructures. As a professor of World Competitiveness at IMD and the University of Lausanne, Professor Garelli expanded the concept of national competitiveness, leading to the creation of the World Competitiveness Reports, which became benchmarks in the field. With IMD's support, he founded the World Competitiveness Centre.

The book distils key concepts of competitiveness from Professor Garelli's extensive travels and meetings with global leaders. It highlights successful and failed policies, providing valuable lessons. The second part of the book addresses the fractured economy that has emerged since 2019, examining its differences from an open-world economy and its implications for future strategies of nations.
