Capital

The Economics Classic, An Abridged Version

Karl Marx

The foundational critique of capitalism that transformed social science forever

In *Capital: The Economics Classic*, Karl Marx combines vivid historical detail with economic analysis to produce a penetrating examination of mid-Victorian capitalist society. This abridged edition makes Marx's most influential work accessible to modern readers while preserving the analytical depth that established it as the most significant work in twentieth-century political economy.

Capital depicts the unfolding of industrial capitalism as a tragic drama, revealing the mechanisms of exploitation, accumulation, and crisis that drive market economies. Marx accomplished for social science what Darwin achieved for biology, providing a systematic framework for understanding economic and social relations. This classic text retains its relevance for contemporary financial and economic discourse.

Readers will also find:

- A systematic critique of classical political economy that reveals the inner workings of capitalist production and exchange
- Historical analysis tracing the development of industrial capitalism including a depiction of the horrors of the 19th century factory system including the employment of children
- Theoretical frameworks for understanding labour, value, and capital that continue to inform economic debate today
- Insights into economic crises, inequality, and market dynamics that speak directly to current financial and

Discourses on Livy

The Politics Classic

Niccolò Machiavelli

Machiavelli's pragmatic blueprint for republican government and active citizenship

In *Discourses on Livy: The Politics Classic*, Niccolò Machiavelli reveals a radically different political vision than the one portrayed in the autocratic ruthlessness of *The Prince*. Through careful commentary on Livy's history of republican Rome, Machiavelli proposes a system of government that upholds civic freedom and security by instilling active citizenship virtues while encouraging citizens to prioritize state needs above selfish interests.

Ambitious in scope yet clear-eyed and pragmatic, the *Discourses* forms a modern theory of republican politics continues to shine a light on contemporary financial, economic, and political issues regarding the role of the state and democracy.

Readers will also discover:

- Machiavelli's carefully argued framework for maintaining civic freedom while balancing individual liberty against collective state security and prosperity
- Practical insights on how republican institutions can cultivate virtuous citizens who actively participate in governance and public affairs
- Analysis of Roman history that illuminates timeless patterns in political behaviour, institutional design, and the preservation of liberty
- A counterpoint to *The Prince* that showcases Machiavelli's nuanced understanding of both autocratic and democratic forms of government

This edition features an introduction by Tom Butler-Bowdon, editor of the Capstone Classics series, that contextualizes this classic

Escape the Wanting, Wishing, Waiting Trap and Get What You (Really) Want

Casey Beros

[View on Edelweiss](#)

The book for everyone thinking, 'There's got to be more for me than this'

You've done everything right: you ticked the boxes and built the life you were supposed to. But instead of satisfaction, there's a voice inside you asking, '*Is this it?*'

Once upon a time, that feeling might have been labelled a midlife crisis. But it's really just the voice of someone who's been waiting for the right time, the right feeling and the right version of themselves to feel ready. You've been stuck waiting for your real life to begin. Most of us live in that waiting room. *More* is the book that gets you out.

Casey Beros has spent two decades asking questions, interviewing the world's leading experts and high performers on what makes us happier and healthier. Most importantly, she asks: what keeps us from going after what we (really) want? The answer is that you don't need more willpower or discipline, but you do need to understand what's holding you back so you can start moving forward.

In *More*, you'll assess the five areas where we tend to want more: health, success, connection, meaning and time. In each one, you'll use the Life Edit tool to cut through the clutter and give you the courage to finally take action. Not someday. Today.

By the end, you'll have more compassion for where you've been, gratitude for where you are and clarity on where you're going. *More* is your permission slip to go after what you want. You are not behind; you are right on time. And it's time for you to get your version of more.

Transform classrooms and eliminate persistent student outcome gaps with research-backed instructional practices

Despite decades of reform, student achievement remains stubbornly connected to a student's background and zip code. **GLEAM®** introduces a transformative framework for addressing this crisis. Drawing on her experience as a teacher, a principal, and CEO of UnboundEd and CORE Learning, Lacey Robinson presents the **GLEAM®** hypothesis: only when teachers' mindset and planning are purposefully put into the service of grade-level, engaging, affirming, and meaningful instruction, do we see teacher actions change and students thrive.

The book breaks down each **GLEAM®** component, demonstrating the interdependence between grade-level instruction, engaging environments, affirming classrooms, and meaningful learning. Robinson and the UnboundEd community reject false trade-offs between rigorous standards and student-centered education, showing how high-quality materials, evidence-based practices, and students' cultural assets transform outcomes. Case studies and workbook pages provide concrete implementation tools for teachers, administrators, and educational leaders.

Readers will also find:

- A comprehensive framework for aligning teacher mindset, planning, and practice to achieve strong outcomes for every single student
- Research-backed strategies for implementing grade-level instruction while affirming students' backgrounds and existing knowledge
- Practical case studies demonstrating successful **GLEAM®** implementation in a wide range of K–12 classrooms and schools

Know Bullying

Communication Strategies to Empower Kids Online and in the Classroom

Jaime Hamilton

[View on Edelweiss](#)

Three communication scripts children can use to defuse bullying immediately

Bullying thrives on power imbalances, yet most interventions require lengthy training that fails children in the moment they need help. *Know Bullying: Communication Strategies to Empower Kids Online and in the Classroom* presents the Three-Message Method, a framework built from communication theory and refined through twenty years of combined K-12 and higher-education teaching experiences by Jaime Hamilton, M.A. These three message types give children scripted language to neutralize aggression instantly.

Know Bullying centers on a communication tool called neutral messages. It highlights three helpful techniques (innocuous words, calm factual observations, and empathetic check-ins) to defuse power imbalances during bullying. Each technique is paired with step-by-step scripts that educators can teach and students can deploy during both in-person and online encounters. The book blends communication research with parent testimonials and addresses the well-documented overlap between schoolyard bullying and cyberbullying across grades K-12.

Readers will also find:

- Ready-to-use scripts that help children interrupt aggression without escalating conflict or losing confidence
- Strategies for building emotional regulation and resilience through practiced, repeatable communication responses in real time
- Guidance on recognizing and responding to cyberbullying that overlaps with in-person bullying situations at school
- Techniques grounded in rhetorical and communication research, not broad behavioral frameworks requiring weeks of training

Everything You Know About Postpartum is Wrong

The Science, the Sacred, and the Future of Maternal Care

Maranda Bower

[View on Edelweiss](#)

A root-cause framework for postpartum healing that challenges outdated care models

Conventional postpartum care operates on myths that leave mothers under-supported—the assumption that recovery takes six weeks, or that mood disorders are purely hormonal. *Everything You Know About Postpartum is Wrong: The Science, the Sacred, and the Future of Maternal Care* confronts these systemic failures directly. Maranda Bower, a biological researcher and founder of Postpartum University®, integrates evidence-based science with ancestral wisdom to present a holistic framework for genuine postpartum recovery.

Structured in three parts, the book examines the historical context behind broken postpartum care, dismantles persistent myths that keep mothers sick, and presents a new model integrating science, tradition, and holistic healing. It addresses nutrient depletion, hormonal imbalances, and the need for sustained long-term support. Actionable strategies equip both providers and mothers to advocate for meaningful change in how postpartum health is understood and practiced.

Readers will also find:

- A critical analysis of the medical, historical, and cultural roots of inadequate postpartum support systems
- Practical strategies for addressing nutrient depletion and hormonal imbalances through root-cause approaches rather than symptom management
- Frameworks for reintegrating ancestral nourishment rituals and community support into modern postpartum care practices
- Evidence-based tools for identifying and debunking common postpartum myths that perpetuate maternal suffering

Slow Tech, The Toyota Way

Why AI and Digital Transformation are Second-Tier Priorities for the World's Best Manufacturer

Jeffrey K. Liker

Achieve excellence through disciplined, human-centered technology adoption

Slow Tech, The Toyota Way ask us to resist “technology obsession” and carefully select, test, and introduce high-value-added technology—a stark contrast to many companies’ rush to digitally transform to something they do not really understand. Pushing “technology solutions” when the problem is not even clear only confuses people and can lead to chaos. Organized around ten timeless principles that readers can apply to their own organizations, the book shows that AI and tech can be contributing factors to operational excellence, if they are subordinate to investments in exceptional people and well-defined processes. Core cases from Toyota and other companies that have been inspired by Toyota’s lean approach are included throughout to show the efficacy of a slower and more methodical approach to change.

Readers will learn how to:

- Consider a range of total value-stream objectives, instead of focusing only on short-term, cost-oriented technology objectives
- Train people through deliberate practice, rather than just sharing user manuals, to develop skills required to effectively use technologies
- Develop in-house capabilities to create and modify technology in order to avoid overdependence on vendors

Slow Tech, The Toyota Way shows business leaders and executives how to harness patience, long-term thinking, careful planning, and experimentation to achieve strategic goals by making breakthrough and routine technologies work for you. Through these principles

Where Does My Stuff Come From

The Logic Behind Global Supply Chains in a Changing World

Willy Shih

Almost nothing is made where you think it is

Where Does My Stuff Come From? reveals the complex international supply networks behind products Americans use daily, from chocolate chips and computer chips to athletic shoes and frozen fish. Written by Willy Shih, a Harvard Business School professor with 28 years of hands-on experience at IBM, Digital Equipment Corporation, and Eastman Kodak, this accessible guide demystifies global supply chains through everyday products.

Shih examines why so many goods get made far away, who actually makes them, and what it costs you. Why do my cashew nuts say they came from Vietnam when they were actually grown in West Africa? What do Henry Ford and lifestyles of the Chinese Communist Party have to do with making iPhones? What do Ozempic and beer have to do with laundry detergent? Things come from where they do for a variety of reasons, and this book will help you understand the economic logic behind it all.

Readers will also discover:

- The brand on the label usually doesn't tell you who actually made the product
- Why 'just make it in America' is harder than it sounds
- How tariffs and industrial policies can have an outsized influence on where things are made
- The tension behind reshoring, high-paying jobs, and having a wide choice of inexpensive products

Ideal for consumers who are curious, business professionals navigating trade disruptions, or anyone trying to make sense of today's trade debates, *Where Does My Stuff Come From?* provides clear context for understanding how global supply chain decisions shape everyday American life and purchasing power.

Uncommon Beliefs

The Seven Principles That Build a Competitive Edge That Lasts

Stephen Mackey

Most leaders aren't held back by what they lack. They are held back by what they have never examined.

There are seven pressures that will test every leader, and most leaders are unprepared for all of them: adversity, uncertainty, truth, standards, identity, support, and purpose. Each pressure reaches past skill and strategy and asks a harder question: *What do you actually believe?* The leaders who thrive under pressure aren't the ones with more talent or better systems. They are the ones whose beliefs have been examined deeply enough to govern their behavior in the hardest moments life and leadership have to offer.

Uncommon Beliefs is not a book about leading others. This is a book about leading yourself first — the work that has to happen before you have any business leading anyone else. The work most leaders skip. The work you'll wish you had done when the pressure is on and everyone is counting on you.

Drawing on two decades of work with over 2.5 million coaches, athletes, and team leaders across the country, *Wall Street Journal* bestselling author Stephen Mackey makes a hard case: talent, timing, and technology all create early separation, but every one of them can be matched, copied, or taken away. The only competitive edge that holds under real pressure is character — intentionally formed, examined, and developed long before you need it most.

Uncommon Beliefs is built around seven examined convictions that show up consistently in the leaders who don't crack under pressure:

- Hard isn't bad
- Optimism requires no evidence
- I am not my performance
- Truth is not my enemy
- Mastery is not the destination

How Leaders Use Lived Insight and Community to Foster Innovation, Strengthen Culture, and Create Lasting Change

K. R. Liu

The Leadership Playbook for the Era When Titles No Longer Inspire Trust

In a world where authority is increasingly fragile and the old rules of leadership no longer apply, the ability to command a team or launch a product isn't enough. Leaders today must move people, build trust across silos, and shape culture — and the ones doing it most effectively aren't relying on their titles to get there. KR Liu has spent more than two decades doing exactly that: as a queer, deaf executive at Google, appointed by the Obama administration to the U.S. Access Board, and the force behind the landmark Over-the-Counter Hearing Aid Act, she has built power and shifted systems not through hierarchy, but through lived insight, radical authenticity, and long-term vision.

Built for More introduces Liu's core leadership progression — Lived Insight → Product Innovation → Storytelling → Long-Term Impact — a framework grounded in empathy, strategic clarity, and systems thinking. Drawing on her own story and those of the world's most effective leaders, Liu makes the case that empathy isn't a soft skill delegated to HR: it's the highest-ROI discipline in the modern workplace, and the only competitive advantage that compounds over time.

Readers will come away equipped to:

- Move teams from compliance to genuine commitment through radical disclosure and behavioral trust-building
- Identify and navigate six workplace archetypes that shape every high-stakes professional environment
- Apply the "innovation tax" framework to diagnose why organizations that ignore lived experience pay a hidden cost in culture and growth
- Lead with a "safety second" mindset — taking calculated risks grounded in purpose rather than waiting for perfect

Turning Client Relationships into Reliable Revenue

David V. Lorenzo

A research-backed system for professionals who want to stop chasing clients and start being chosen by them

The High-Net-Worth Advisor: Turning Client Relationships into Reliable Revenue is a behavioral operating system for attorneys, CPAs, wealth managers, and consultants who want to build practices around clients with \$5 million or more in investable assets and business owners generating \$10 million or more in annual revenue. Drawing on 200 in-depth interviews and a study of over 2,000 professionals, David V. Lorenzo identifies the behaviors, structures, and disciplines that separate elite advisors from everyone else.

Lorenzo introduces Situational Authority and reveals why credentials alone fall short in this market. The book replaces the traditional sales funnel with the Flywheel—a closed-loop ecosystem of curated clients, a vetted expert network, strategic alliances, and a rigorously filtered pipeline where credibility compounds. Each chapter builds on the last, moving from market definition to behavioral identity to a repeatable engagement lifecycle.

Readers will also find:

- Seven premium behaviors that high-net-worth clients use to evaluate advisors before any engagement letter is signed
- A four-stage engagement lifecycle that turns professional judgment into a visible, repeatable client experience
- The critical distinction between Main Street and high-net-worth clients—and why each target type requires a fundamentally different approach
- A framework for building strategic alliances with the gatekeepers who control access to wealthy families and business owners

Workforce Intelligence

The People-First Playbook for Leading Your Company Through AI Transformation

Mike Sullivan

[View on Edelweiss](#)

The operator-tested framework for leading AI transformation as a talent strategy

Most enterprise AI initiatives fail because organizations treat them as technology rollouts rather than talent management challenges. In *Workforce Intelligence: The People-First Playbook for Leading Your Company Through AI Transformation*, OneDigital co-founder Mike Sullivan and Chief Product Officer Vinay Gidwaney introduce an operating model that treats the workforce as a composed capacity of human judgment and machine capability, orchestrated together.

Built from the authors' experience scaling OneDigital to a \$1.7 billion enterprise serving 100,000 employers, *Workforce Intelligence* traces the evolution from Personnel Management to Human Capital Management to the new discipline of WI. The book delivers real client situations, internal operating metrics, and a tested management philosophy forged under private-equity scrutiny.

Ultimately, you'll learn how to pass the "Humanity Test": When confronted with the option of reinvesting returns from AI in the people who built your business or pocketing the excess margins, you'll know the best option is the first one – and exactly how to execute it. You'll also find:

- A historical arc showing why each workforce management transition required a new philosophy, not just new tools
- Named scenes and real client situations illustrating how the Workforce Intelligence framework operates in practice
- Guidance for CHROs on positioning people leadership, not technology teams, as the owner of AI transformation
- A measurement framework designed to withstand board-level scrutiny when justifying AI-driven workforce investments

Redesigning Nonprofits

Catalysts For A Stronger Democracy, Tools, Strategies, and Insight for Social Change

Tracy Gary

[View on Edelweiss](#)

Move over business and government. The third sector is here to inspire hope and improve democracy in our 250th year...and beyond!

In *Redesigning Nonprofits*, three seasoned nonprofit leaders confront a pivotal reality: the nonprofit sector is a core pillar of American democracy — yet its structures were built for a different era. When governments stall and markets fail, nonprofits have always been the ones to step in – giving voice to the voiceless, advancing social justice, and providing essential services that allow communities to function. But today, chronic underfunding, administrative burnout, and a growing web of interconnected crises have exposed an outdated operating system that forces incrementalism when the moment demands transformation.

The authors argue that these challenges are not failures of leadership or commitment — they are symptoms of structures that no longer match the scale of the problems. Drawing on history, research, and insights from dozens of nonprofit leaders and innovators, the book explores how new approaches to funding, leadership, technology, and collaboration can unlock the sector's full potential.

Readers will discover:

- Why nonprofits are essential democratic infrastructure — and what's at stake if we fail to reform them
- Actionable insights from leaders who have pioneered new models of governance and collaboration in response to rapidly evolving conditions
- Practical frameworks for replacing outdated funding mechanisms and leadership models that no longer serve mission-driven organizations
- Strategies for building organizational resilience and purpose-driven cultures that can thrive amid uncertainty

The Sales Leader's Framework for Closing Deals Without Caving on Price

Stop losing margin to unnecessary discounts with a structured pricing defense framework

In *Priced to Win: The Sales Leader's Framework for Closing Deals Without Caving on Price*, Victor Antonio, a globally recognized sales authority and former President of Global Sales and Marketing, reveals why discounting is a behavioral reflex rather than a pricing strategy. Drawing on behavioral science and negotiation psychology, Antonio provides a structured approach for responding to price pressure with confidence instead of concessions.

At the core of the book is the proprietary 4Q Framework—Gain, Retain, Grow, Re-engage—which reframes discount requests through the lens of relationship stage and strategic context. Readers gain eight psychologically grounded countermeasures to price pressure, real-world scripts, decision frameworks, and a leadership blueprint for building a no-discount culture from the ground up.

Readers will also discover:

- Why most price pressure stems from psychological discomfort and misaligned incentives rather than genuine market forces
- How to diagnose buyer uncertainty and respond with the appropriate countermeasure for each specific relationship stage
- Real-world scripts and structured decision frameworks designed for immediate deployment during high-stakes live sales conversations
- A leadership blueprint for embedding margin protection into sales team culture, training, and compensation structures
- Strategies for defending price in environments increasingly shaped by digital procurement tools and AI-driven buyer

The Reinvention Advantage: How to Survive and Monetize Volatility in a World That Won't Settle Down

Most organizations are now reinventing their business every three years or less. Not once a generation. Not once a decade. Every three years — and that pace is accelerating. Dr. Nadya Zhexembayeva has been tracking this velocity since 2018 across thousands of organizations worldwide, and the trajectory is unambiguous: what used to be an extraordinary act of strategic leadership has become the minimum requirement for staying competitive. The question is no longer whether to reinvent. It is whether your organization has built the strategic capability to do it continuously — before the market forces your hand.

In *The Reinvention Advantage*, Dr. Zhexembayeva — founder of the cross-disciplinary field of reinvention in management science, and one of the world's leading authorities on strategic leadership in disruption — delivers the definitive answer to the defining strategic question of our era: how do you build competitive advantage in a world that won't hold still?

The answer is not another transformation program. It is not a change initiative with a launch date and a victory lap. It is a reinvention operating system — a set of integrated strategic capabilities that allows organizations to continuously anticipate disruption, design their next business model, and implement that transition without ever losing momentum. Not as a project, but as a permanent strategic rhythm.

This is the capability that turned Mars from a stalling candy company into a \$55 billion enterprise across three decades of layered reinvention. It is what allowed BOGNER to walk out of a global pandemic with record-breaking financial results by running crisis response and strategic opportunity simultaneously rather than sequentially. It is what drove Visa to build a \$10.9 billion value-

101 Design Methods, 2nd Edition

A Structured Approach for Driving Innovation in Your Organization

Vijay Kumar

Design thinking uses methodologies like observation, prototyping, building, and storytelling to develop innovative solutions that can be applied to a wide range of business scenarios, and address nearly any challenge or endeavor. Whether the intended outcome is a product, an environment, a process, a policy or an experience, this inherently collaborative approach brings together people from different disciplines to effectively explore new ideas--ideas that are more human-centered, that are more executable, and that generate valuable new outcomes.

101 Design Methods is a step-by-step guidebook for successful innovation planning. It approaches the practice of creating new products, services, and customer experiences as a science, rather than an art, providing a practical set of collaborative tools and methods for planning and defining successful new offerings. Strategists, managers, designers, and researchers who undertake the challenge of innovation, despite a lack of established procedures and a high risk of failure, will find *101 Design Methods* an invaluable resource. Novices can learn from it; managers can plan with it; and practitioners of innovation can improve the quality of their work by referring to it.

This revised edition is updated to discuss current thinking on innovation and creativity. It offers new guidance on which methods to use at which stage of the design process, how to scale methods for different sized project, and quick start guides to kick off fast implementation. It also incorporates new use cases and success stories with insights from effective application across various industries.

Beyond Beauty

How Trauma and Repair Transform Biology, Identity, and Women's Health

Kayte Susse

Transform your deepest wounds into your greatest source of wisdom and purpose

In *Beyond Beauty: How Trauma and Repair Transform Biology, Identity, and Women's Health*, Dr. Kayte Susse, a functional health educator and tireless advocate for women in the breast implant illness movement, reveals how trauma encodes itself in the body and how authentic healing requires a physical, spiritual, and scientific approach to suffering. Dr. Susse draws on her own journey through illegal adoption, childhood trauma, sexual abuse, mercury poisoning, and life-threatening illness caused by breast implants to explain how understanding the mind-body-spirit connection becomes the foundation for transformation.

This book integrates cutting-edge neuroscience, polyvagal theory, attachment science, toxicology, and hormonal medicine to show how early identity disruptions create cascading effects that manifest as complex chronic illness, destructive patterns, and disconnection from self. Standalone teaching chapters offer deep dives into mercury toxicity, chelation science, the immune response to silicone, nervous system architecture, hormonal cascades, and the neurobiology of identity and fear. The book also draws on Biblical teachings, Kabbalistic frameworks, and hard-won spiritual insight to address the dimensions of healing that clinical medicine alone cannot reach. The result is a detailed roadmap that bridges the gap between the lived experience of trauma and the practice of medicine.

You'll:

- Explore the intersection of trauma, aesthetics, and chronic illness through an unflinchingly honest personal narrative combined with clinical insight
- Discover how the ACE index, childhood abuse, neglect, and household dysfunction create measurable biological

Clear In Tension

How to Get Better at Conflict

Tim Duggan

Don't avoid conflict. Learn how to harness it.

Conflict is where the best decisions, strongest relationships and most creative work come from. The trouble is, almost nobody is taught how to do it well. We treat tension as a sign that something's gone wrong, when it's usually a sign that something matters.

But conflict is a skill, and like any skill, it can be built. When you learn how to handle conflict better, you learn how to live better. In *Clear in Tension*, award-winning author and entrepreneur Tim Duggan draws on interviews with leading researchers and global experts to give you a step-by-step method for navigating conflict. You'll build real-world skills through practical exercises you can use immediately, at work, in relationships and within yourself.

Learn how to:

- Read any conflict accurately, so you can respond well
- Understand your default responses (and where they help or hold you back)
- Know which fights are worth having and which aren't
- Hear what's actually at stake, not just what's being said
- Find shared direction, even when you don't fully agree

Being good at conflict is how we get things done. With this book, you'll move from carrying tension to working through it, and finding clarity in the moments that matter most. That's what it means to be clear in tension.

Built to Burn

Why Work Burns People Out and How the Best Leaders Build Cultures That Don't

Karl Treacher

[View on Edelweiss](#)

Burnout is a leadership problem, not a people problem — and the solution is in your hands

The economic cost of employee exhaustion, disengagement and despair impacts the global economy by as much as \$10 trillion every year. In the face of this mass burnout, simple wellness programs are struggling to make a difference. *Built to Burn* exposes the uncomfortable truth: Burnout is a matter of culture, not a personal failure. And leaders need to redesign the conditions that ignite this fire.

Built to Burn shares clear, deep insights into why wellbeing and productivity are both suffering under current models of work. Drawing on neuroscience, organisational psychology and 25+ years of consulting, Karl Treacher shows how to rethink the goals and culture of the modern workplace. The best leaders drive extraordinary performance while protecting the people who produce it. With the tools in this book, you'll learn how to build solutions that lead to healthier, happier, higher-performing teams.

You'll discover:

- why psychosocial safety is now a legal obligation in Australia, the UK and the EU, and what that means for how you lead
- why the manager, not the wellness program, is the single biggest predictor of whether your team burns out or thrives
- how always-on digital culture fuels the burnout epidemic and chronic workplace stress physically changes the brain
- a 90-day action plan for building a culture where high performance and wellbeing reinforce each other.

Built to Burn is a call to action for anyone who manages people: Stop treating the symptoms, and start redesigning the system.

Enterprise-wide AI Risk Management (EW-AiRM)

A Practical Framework for Managing AI Risks in any Organisation

Markus Krebsz

A structured governance framework for managing AI risk across your entire organization

Enterprise-Wide AI Risk Management (EW-AiRM™): A Practical Framework for Managing AI Risks in any Organisation, by Prof. Markus Krebsz, introduces a multi-layered governance framework forged from five years of United Nations participatory AI policy development and over thirty years of risk management experience. EW-AiRM™ augments existing ERM frameworks like ISO 31000, COSO, and the UK Orange Book with AI-specific governance capabilities.

The book presents a risk taxonomy drawn from more than 1,700 categorised AI risks across seven evidence-based domains and 24 sub-domains, alongside over 800 risk mitigation controls organised into four actionable quadrants. Six foundational pillars establish governance prerequisites before AI deployment, while the HAIPECR ethical filter keeps human accountability central to every governance decision.

Readers will also find:

- A resilience framework designed to prepare organisations for AI Black Swan events that cannot be fully anticipated in advance
- Practical guidance on extending existing enterprise risk management structures rather than replacing them with entirely new governance architectures
- A risk taxonomy spanning seven domains and 24 sub-domains built from over 1,700 categorised AI risk scenarios
- The HAIPECR ethical framework, hosted on the OECD.AI tool website, embedding human accountability into every governance decision

How AI is reshaping jobs, regulation, and the American workplace

The Search for Truth in Information and Algorithms

Derek W. Gibson

Find truth in the noise of AI-driven misinformation and data deception

Data, AI, and Noise: The Search for Truth in Information and Algorithms is a thought-provoking look at how generative AI and algorithmic platforms are shaping how we find, evaluate and ultimately trust information in the AI era. Written by Derek W. Gibson, former Executive Director, VP of Analytics at Wells Fargo and adjunct professor at Wake Forest University School of Business, this book draws on digital forensics, psychology, and organizational leadership to ask the hard questions about AI.

Through real-life anecdotes, sharp analysis, and engaging storytelling, Gibson examines how AI technologies controlled by a small number of organizations shape individual decision-making and public perception. The book explores solutions for building a personal AI defense, covering techniques to evaluate information sources, identify deepfakes, recognize cognitive biases exploited by misinformation campaigns, and navigate with greater confidence in daily media consumption.

Data, AI, and Noise is a call to action for data leaders, AI developers, Social Media platform strategists, policymakers, and anyone navigating a world where information authority has shifted from institutions to algorithms. The debate we are not having about the influence of AI inside organizations and across governments is one this book insists we start.

Readers will explore:

- How recommendation algorithms are engines that create individualized realities optimized for engagement, not the truth
- Strategies to recognize and counter sophisticated misinformation from influencers, automated bots, and
