How Grief and Loss Can Teach You to Live

David Ferrugio

[View on Edelweiss](#)

Grief isn't a problem to be solved – it's a teacher that shows up uninvited and refuses to leave until you've learned everything it has to offer

In *You're Not Dead Yet*, David Ferrugio, host of the acclaimed DEAD Talks Podcast with over one million followers, transforms his personal tragedy into a powerful exploration of life's most difficult moments. After losing his father in the World Trade Center on 9/11 when he was just twelve years old, Ferrugio has spent decades channeling his grief into meaningful conversations with celebrities, experts, and everyday people about death, spirituality, and the afterlife.

This deeply personal yet universally resonant book doesn't offer easy answers or step-by-step healing guides – instead, it provides something far more valuable: honest companionship on the messy, unpredictable journey of grief and the profound insights that emerge from our darkest moments.

Through raw storytelling, spiritual exploration, and unfiltered human connection, Ferrugio weaves together his own experiences with wisdom gathered from hundreds of podcast conversations about loss, near-death experiences, and what it means to truly live while carrying grief. Rather than presenting grief as a linear process with clear stages, he reveals it as a chaotic carousel of emotions that ultimately teaches us everything about what matters most. The book concludes with practical insights and perspectives that will help you discover your own path through loss and toward a deeper understanding of life's meaning.

- **A touchstone for the millions navigating loss:** With 2.5 million deaths annually in the United States leaving an average of five grieving people behind, this book serves as vital connection and community for those seeking to

Stop Waiting, Start Living in Your Magic

Alicia Arlene

Stop waiting for confidence and start claiming the life you deserve today

You're Already Her: Stop Waiting, Start Living in Your Magic is a grounded, empowering guide for women who feel ready for more but keep holding themselves back. Mindset coach Alicia Arlene shares her journey through loss, self-doubt, and identity rebuilding to help women stop waiting for confidence and start leading themselves from self-trust.

Rather than teaching women how to “fix” themselves, the book shows how real change happens through embodied choices made in everyday moments. Through vulnerable stories, real-life examples, and reflective practices, readers learn that confidence isn’t something you earn someday, it’s something you choose, especially when it feels uncomfortable.

You’ll also find:

- Insight into why women get stuck in waiting mode, even when they know they’re capable of more
- Guidance on making decisions from alignment instead of fear or people-pleasing
- Embodiment practices for staying grounded when doubt, discomfort, or visibility arise
- Real stories that show what it looks like to choose yourself before you feel ready
- Reflection questions to help integrate self-trust into daily life immediately

You're Already Her is for women who are done postponing their lives and ready to move forward with clarity, courage, and self-leadership. It’s a reminder that the life you want isn’t built by becoming someone new, it’s built by trusting yourself enough to move now.

Understand how algorithmic power governs society and how to hold it accountable

While much of the public debate remains focused on whether AI systems are truly intelligent, when they may surpass human intelligence, or how useful or dangerous they may become, the deeper issue is being overlooked.

Today's most powerful algorithmic systems increasingly reassemble powers that political thought once deliberately separated under the doctrine of *Trias Politica*.

The book argues that compute, energy, training operate as an algorithmic executive; that code, model design, optimization targets, and embedded constraints function as an algorithmic legislature; and that evaluation, auditing, and benchmarking function as an algorithmic judiciary.

What would be intolerable for many, the fusion of rulemaking, execution, and judgment, is becoming the standard of our society enabled by algorithmic systems.

They now shape access, opportunity, and justice at machine speed – yet they operate largely beyond democratic scrutiny. *Trias Algorithmica: What Code Rules*, by Hamilton Mann, a Thinkers50 honouree, originator of the concept of Artificial Integrity, and leading authority in AI transformation, traces where this power originates, how it sustains itself through manufactured dependence, and what a constitutional framework for algorithmic governance must look like.

The book introduces original concepts including aggregogenous monopoly, Technological Stockholm Syndrome, dependautonomy, and unpacks the revaluing mechanism of work. It also presents a practical framework of nine critical questions for interrogating algorithmic power deployment. It proposes algorithmic safety cases

Drawing from decades of experience helping Fortune 500 companies navigate digital disruption, author Pete Blackshaw reveals why brands unprepared for this seismic shift face existential risk.

The Trust Code

How to Unlock AI's Promise Without Losing Humanity

Tiffany Xingyu Wang

[View on Edelweiss](#)

Trust is the missing skill of the AI era. This book shows you how to build it.

AI systems already advise our doctors, tutor our children, and drive our cars. They sound confident while being wrong, intimate without being responsible, and authoritative without being accountable. Our instincts for deciding whom to trust are no match for machines that fake understanding at scale. The question is not whether AI will reshape society. It is whether humans will remain in the driver's seat when it does.

In *The Trust Code*, Tiffany Xingyu Wang—a World Economic Forum Young Global Leader, USPTO patent holder, and digital safety pioneer who helped build AI systems protecting over a billion users—delivers the first comprehensive framework for practicing trust as a discipline in the age of AI. Trust is not a feeling. It is a decision. And it is the most consequential one you will make.

Through three movements—rethink trust, decode AI, reclaim your agency—you will learn:

- A new language for trust—where it comes from, what it rests on, and why your instincts can mislead you—so you create common ground when everyone talks past each other
- The hidden pattern behind major technological leaps from the printing press to autonomous vehicles, and why AI is the first to break it
- The forces driving AI forward—curiosity, greed, and fear—and how to separate earned trust from demanded trust so you see clearly instead of react blindly
- Thousands of AI risks distilled into three categories you can act on—mirrors, weapons, and ghosts—freeing you to decide what to mitigate, constrain, or refuse

How the best consultants win clients and deals in an oversaturated, disrupted, and AI-accelerated market where business and public policy challenges are as great as they have ever been

The consulting landscape has dramatically shifted: supply exceeds demand, clients are more sophisticated and want results faster, and AI-powered platforms are reshaping almost everything. *Rainmaker: How the Best Consultants Think, Act, and Win in an AI-Accelerated World* reveals how the best consultants bring in new business when traditional approaches no longer work.

Drawing on decades of global leadership experience at major consulting firms and as client executives, Plumridge and Nason explain how the best consultants read the market differently (and earlier), architect value (not deliverables), earn a higher level of trust with senior executives, and operate with elite routines and habits that consistently set them apart from their colleagues.

Readers will also discover:

- How the proliferation of niche firms, AI platforms, and integrated service models has reshaped the consulting marketplace
- The strategies, attitudes, behaviors, and attributes that set apart the best from their peers
- Practical AI-enhanced approaches to pre-sales activities and client relationship development that deliver measurable results
- Frameworks for thriving amid disruption, technological change, and intensifying global competition in professional services
- Assessments of how big projects were won and trusted relationships established through more than 30 real stories

You already know investing matters. But somewhere between the jargon, the market headlines and the nagging feeling that it's too complex (or too late), you're not sure your money is doing everything it should. The good news? In *The One-Page Investing Plan*, he proves that investing success belongs to anyone willing to begin. No formulas. No trading strategies. Entrepreneur-led companies in Asia create more value than their peers -- and we can prove it. But the more interesting question is how -- and why -- they do it. There is strong empirical evidence that one constituency of business leadership outperforms the rest: the entrepreneur-led Asia Pacific company. Asia's position among the world's leading companies has transformed in the 21st century. Let's start with the over 8,000 companies that made the global top 5,000 list by market capitalization in any single year between 2000-2023 -- the largest global companies in the last two decades. Within this universe, since 2000, Asia has grown to account for 40% of their revenues, from 22%. That's the biggest contribution of any region. Market capitalization is our core definition of value creation, as it reflects the long-term value delivered to the market. Other indicators such as economic profit and return on invested capital (ROIC) also provide insights into financial performance, but they often overlook the long-term outlook and don't account for companies making substantial investments with a focus on long-term goals. The Insider You Built

How Organizations Stay in Control of Autonomous AI Agents

Camille Stewart Gloster

An operational playbook for maintaining control as AI agents scale across the enterprise

AI agents are rapidly becoming embedded across enterprise systems. They schedule meetings, generate reports, approve transactions, interact with customers, and make decisions across digital environments. Organizations have, in effect, created a new kind of insider: software trusted to act on the company's behalf.

Seventy-nine percent of executives report that AI agents are already deployed in their organizations, yet few companies have governance frameworks for systems that can plan actions and operate across the business with minimal human direction. As these systems grow more capable and integrated, governing them effectively is emerging as a defining leadership challenge of the AI era.

In *The Insider You Built: How Organizations Stay in Control of Autonomous AI Agents*, Camille Stewart Gloster introduces the Agent-Centered Enforcement and Attribution (ACE) Framework, a practical model for investigating, attributing, and responding to failures when autonomous AI systems act with delegated authority. The book reframes AI incidents as governance challenges, helping organizations identify breakdowns across human and machine decision paths and respond when AI creates operational, regulatory, or reputational risk. The ACE Framework provides durable governance infrastructure that evolves alongside AI capabilities, enabling leaders to maintain control as adoption accelerates.

Readers will discover how to:

- Adapt insider risk, security, and governance programs for autonomous AI agents operating with delegated authority

AI Explained

A Guide for Non-Technical Readers

Wendy Hall

[View on Edelweiss](#)

Understand how artificial intelligence actually works, from first principles to generative models

AI Explained: A Guide for Non-Technical Readers builds understanding of artificial intelligence from first principles rather than diving in at the top. Written by experienced policy and technical experts, the book walks through rules and logic-based approaches, statistical methods, neural networks, machine learning, and generative models in accessible, structured terms.

Each major section concludes with a dedicated use-cases chapter grounding abstract concepts in practical scenarios drawn from healthcare, law, and business. Rather than teaching readers how to build or deploy AI, the book answers a more fundamental question: how do these systems achieve the outcomes they produce? Coverage of AI policy, ethics, and societal impact rounds out the treatment, informed directly by the authors' advisory roles with governments and international bodies.

Readers will also find:

- A structured progression from foundational principles through symbolic, statistical, connective, learning, and generative approaches to AI
- Real-world use cases connecting each branch of AI to familiar scenarios in professional and everyday contexts
- Balanced coverage of AI ethics, regulation, and societal impact drawn from direct policy advisory experience
- Clear explanations of how neural networks, machine learning algorithms, and large language models produce their results
- An approachable foundation suited equally to cross-disciplinary university courses and independent professional development

From Technical Foundations to Social Impact

Giada Pistilli

Build responsible AI companions with practical ethical frameworks for developers

The Essential Guide to AI Companions: From Technical Foundations to Social Impact provides developers and researchers with structured frameworks for building AI companions that account for both technical design and the psychology of human-AI relationships. Written by the former Principal Ethicist at Hugging Face, this guide examines how architecture decisions shape attachment dynamics, user trust, and social impact across the entire development lifecycle.

From system architecture to deployment monitoring, this guide helps teams anticipate challenges around attachment dynamics, context manipulation, and user wellbeing before they emerge in production. Drawing from real-world cases across the AI companion landscape, it provides actionable strategies for content moderation policies, ethical framework implementation, and ongoing system maintenance that safeguard users while enabling meaningful interactions.

You'll also discover:

- Practical frameworks for weaving ethical considerations naturally into technical workflows throughout the development process
- Strategies for addressing trust, safety, and social impact challenges that typically surface only after deployment
- Methods for building content moderation systems that balance user freedom with wellbeing protections

Build production-grade multi-agent AI systems with LangChain, LangGraph, and MCP

Practical Multi-Agent AI Systems: How to Architect, Build, and Scale Next-Generation AI Systems That Work in the Real World walks through a complete, production-grade multi-agent system as a continuous project example. Using LangChain, LangGraph, MCP, A2A, and language models from OpenAI, Anthropic, and Amazon Bedrock, the book covers knowledge retrieval, personalized response generation, escalation orchestration, error handling, controls to secure multi-agent AI systems, integration testing and model evaluations, and deployment considerations with real, runnable code designed for practitioners.

Each chapter pairs architectural insights with hands-on implementation, covering patterns including ReAct, Supervisor-Driven Network, Hierarchical Network, Tree-Of-Thought, Chain-Of-Agents, Sequential Orchestration, Semantic Consensus, Hand-Off Orchestration, and Magentic Orchestration. All code examples are available through an online source code repository, allowing readers to clone, run, and experiment with the full solution as they progress.

You'll also discover:

- AI-driven planning, reasoning, and orchestration strategies purpose-built to fine-tune multi-agent behavior, optimize system performance, and ensure reliable execution in production environments
- System prompt engineering, role definition, actions and tools selection, and memory management techniques specific to multi-agent architectures
- Context engineering approaches for precise and concise context tuning that directly affect agent output quality and reliability
