Mathematical Logic Quarterly
A Journal for Mathematical Logic, Foundations of Mathematics and Logical Aspects of Theoretical Computer Science
2007. Volume 53. 6 issues per year.
ISSN Print 0942-5616
ISSN Electronic 1521-3870

Editor
A. Hemmerling, Greifswald, GER

Mathematical Logic Quarterly (MLQ) publishes original contributions on mathematical logic and foundations of mathematics and related areas such as
- general logic
- model theory
- recursion theory
- set theory
- proof theory
- constructive mathematics
- algebraic logic
- nonstandard models
- logical aspects of theoretical computer science

MLQ is abstracted/indexed in
- Mathematical Reviews
- Science Citation Index
- CompuMath Citation Index
- INSPEC
- Zentralblatt Mathematik

Mathematische Nachrichten
2007. Volume 280. 16 issues per year.
ISSN Print 0025-584X
ISSN Electronic 1522-2616

Editor-in-Chief
R. Mennicken, Regensburg, GER

Mathematische Nachrichten publishes
- original papers on new results and methods that hold prospect for substantial progress in mathematics and its applications
- all branches of analysis, algebra, number theory, geometry and topology, flow mechanics and theoretical aspects of stochastics are given special emphasis

Mathematische Nachrichten is abstracted/indexed in
- Current Contents/Physical, Chemical and Earth Sciences
- Mathematical Review
- Zentralblatt für Mathematik
- Math Database on STN International
- INSPEC
- Science Citation Index

Complexity
6 issues per year.
ISSN Print 1076-2787
ISSN Electronic 1099-0526

Editor-in-Chief
P. Schuster, Vienna, A

Executive Editor
A. W. Hubler, Urbana, IL, USA

Complexity is a cross-disciplinary journal focusing on the rapidly expanding science of complex adaptive systems. It interrelates several fields by promoting discussion of common problems and their solutions among disciplines. Articles offer recent research results, educational overviews, new theoretical insights, and reviews. Articles deal with such methodological themes such as chaos, genetic algorithms, cellular automata, neural networks, and evolutionary game theory. Papers treating applications in any area of natural science or human endeavor are welcome, and especially encouraged are papers integrating conceptual themes and applications that cross traditional disciplinary boundaries.

New in 2007
Special Issue
Conference on Operator Theory, Function Spaces and Applications. Dedicated to the 60th birthday of Frank-Olme Speck.

GAMM – Mitteilungen
2007. Volume 30. 2 issues per year.
ISSN Print 0936-7195

Editor
P. Steinmann, Kaiserslautern, GER

GAMM-Mitteilungen (GAMM-Reports)
- the official organ of the Gesellschaft für Angewandte Mathematik and Mechanik e.V. (GAMM)
- each issue now devoted to a hot topic, novel finite elements methods, ice mechanics, microstructures

ZAMM
Zeitschrift für Angewandte Mathematik und Mechanik/
Journal of Applied Mathematics and Mechanics
2007. Volume 87. 12 issues per year + electronic access to PAMM.
ISSN Print 0044-2267
ISSN Electronic 1521-4001

Editors-in-Chief
H. Altenbach, Halle, GER
A. Mielke, Berlin, GER

ZAMM publishes
- one of the oldest journals in the field of applied mathematics and mechanics
- scientists all over the world appreciate its high publishing standards

New in 2007
Special Issue
Volume 87, issue 2:
Actual problems in continuum mechanics.
To the memory of Pavel A. Zhilin.

Numerical Linear Algebra with Applications
ISSN Print 1070-5325
ISSN Electronic 1099-1506

General Editor
O. Axelsson, Uppsala, SE

Co-Editor
P. S. Vassilevski, Livermore, USA

Associate Editor
M. Neytcheva, Uppsala, SE

The journal of Numerical Linear Algebra with Applications focuses on mathematical rigour in presenting new methods, including analysis and applications. The journal also emphasizes analysis of the computational and communication complexity of algorithms in Numerical Linear Algebra, when implemented in different computer architectures. Published 10 times a year, the journal circulates original research papers and survey articles keeping subscribers up to date with the latest developments in the field.

Top articles
- Computation of multiple eigenvalues and generalized eigenvectors for matrices dependent on parameters (Vol. 13, No. 5)
- Interpreting linear systems of equalities and inequalities. Application to the water supply problem (Vol. 13, No. 5)
- Recent computational developments in Krylov subspace methods for linear systems (Vol. 14, No. 1)

International Journal for Numerical Methods in Engineering
ISSN Print 0029-5981
ISSN Electronic 1097-0207

Editors
R. W. Lewis, Swansea, UK
T. Belytschko, Northwestern Univ., USA

Associate Editors
R. de Borst, Delft, The Netherlands
C. Farhat, Stanford, USA

Founded nearly three decades ago, the highly prestigious International Journal for Numerical Methods in Engineering is a leading journal in the field of Numerical Methods, publishing refereed contributions describing significant developments in numerical methods and their application to the solution of practical engineering problems.

Top articles
- History of the stiffness method (Vol. 67, No. 2)
- An enhanced genetic algorithm for structural topology optimization (Vol. 65, No. 1)
- A three-dimensional finite element method with arbitrary polyhedral elements (Vol. 67, No. 2)
Biometrical Journal
Methods / Applications / Case Studies / Regulatory Aspects / Reviews

2007. Volume 49. 6 issues per year.
ISSN Print 0323-3847
ISSN Electronic 1521-4036

Editors
E. Brunner, Goettingen, GER
M. Schumacher, Freiburg, GER

Biometrical Journal publishes papers on the development of statistical and related methodology and its application to problems arising in all areas of the life sciences, in particular in medicine. Methodological developments should be motivated by an interesting and relevant problem from these areas that is ideally worked out as an illustrative example; papers containing extensive mathematical theory only will be excluded.

Special Issue in 2007
- Topical issue on Multiple Comparisons, selected papers from the Shanghai Congress, August 2006

Top articles
- Application of Adaptive Designs - a Review, (Vol. 48, No. 4)
- Parameter Estimation and Goodness-of-Fit in Log Binomial Regression (Vol. 48, No. 1)
- Planning and Analyzing Adaptive Group Sequential Survival Trials (Vol. 48, No. 4)

Communications in Numerical Methods in Engineering

ISSN Print 1069-8299
ISSN Electronic 1099-0887

Editors
R. W. Lewis, Swansea, UK
G. F. Carey, Austin, USA

Advisory Editor
O. C. Zienkiewicz

Communications in Numerical Methods in Engineering is an international journal which publishes short, refereed contributions enabling significant developments in numerical methods and their application to be made available quickly to the scientific and engineering community.

Top articles
- A note on least squares methods (Vol. 22, No. 2)
- Efficient finite element simulation of crack propagation using adaptive iterative solvers (Vol. 22, No. 2)
- A combined implicit-explicit algorithm in time for non-linear finite element analysis (Vol. 22, No. 1)

Journal of Chemometrics

ISSN Print 0886-9383
ISSN Electronic 1099-128X

Editor-in-Chief
S. D. Brown, Univ. of Delaware, USA

This leading international journal publishes primary research, hot topic reviews, tutorials and short communications on fundamental and applied aspects of chemometrics, including sensory analysis, process analytical technology, technometrics, bioinformatics, environmental analysis and multivariate analysis.

Top articles
- Robust methods for multivariate data analysis (Vol. 19, No. 10)
- Applications of integrated sensing and processing in spectroscopic imaging and sensing (Vol. 19, No. 10)
- Symbiosis of chemometrics and metabolomics: past, present, and future (Vol. 19, No. 5-7)

Mathematical Methods in the Applied Sciences

2007. Volume 30. 18 issues per year.
ISSN Print 0170-4214
ISSN Electronic 1099-1476

Managing Editor
W. Sprößig, Freiberg, GER

Editors Emeriti
B. Brosowski, Frankfurt, GER
G. F. Roach, Glasgow, UK

Mathematical Methods in the Applied Sciences provides a valuable forum for the exchange of multidisciplinary mathematical methods. It does not focus on numerical processes or the application of well established methods, instead it examines specific problems in the applied sciences arena. Papers published in this journal are original works that lead to further understanding and solutions to these issues.

Top articles
- Existence of global strong solution to the micropolar fluid system in a bounded domain (Vol. 28, No. 13)
- Stability of transonic shocks for the full Euler system in supersonic flow past a wedge (Vol. 29, No. 1)
- The tanh method: a tool for solving certain classes of non-linear PDEs (Vol. 28, No. 17)

Numerical Methods for Partial Differential Equations

2007. Volume 23. 6 issues per year.
ISSN Print 0749-159X
ISSN Electronic 1098-2426

Editor-in-Chief
G. F. Pinder, Burlington, VT, USA

Editors
J. R. Whiteman, Uxbridge, UK
Ismael Herrera, Mexico D. F., MX

NMPDE is an international journal that covers research into the development and analysis of new methods for the numerical solution of partial differential equations. It is read by and directed to a broad spectrum of researchers in numerical methods for partial differential equations throughout science and engineering. The numerical methods and techniques themselves are emphasized rather than the specific applications. The journal is interdisciplinary, while retaining the common thread of applied numerical analysis.

Communications on Pure and Applied Mathematics

2007. Volume 60. 12 issues per year.
ISSN Print 0010-3640
ISSN Electronic 1097-0312

Executive Editor
S. R. S. Varadhan, New York, NY, USA

Managing Editor
P. D. Monsour, New York, NY, USA

The journal publishes papers originating at or solicited by the Courant Institute of Mathematical Sciences. It features recent developments in applied mathematics, mathematical physics, and mathematical analysis. The topics include partial differential equations, computer science, and applied mathematics. CPAM is devoted to mathematical contributions to the sciences; both theoretical and applied papers, of original or expository type, are included.

- One of the top mathematics journals as ranked by the ISI, with an impact factor of 1.841!

Random Structures and Algorithms

ISSN Print 1042-9832
ISSN Electronic 1098-2418

Editors-in-Chief
M. Karonski and A. Rucinski,
both Poznan, POL and Atlanta, GA, USA
J. Spencer, New York, NY, USA

Random Structures and Algorithms covers the latest research on discrete random structures, while presenting applications of such research to problems in combinatorics and computer science. The Journal provides a natural home for a significant body of current research, and a useful forum for ideas on future studies in randomness.

In particular, the journal presents results concerning random graphs, hypergraphs, matroids, trees, mappings, permutations, matrices, sets and orders, as well as stochastic graph processes and networks with emphasis on the use of probabilistic methods in combinatorics as developed by Paul Erdős. The journal focuses on probabilistic algorithms, average case analysis of deterministic algorithms, and applications of probabilistic methods to cryptography, data structures, searching, and sorting.

A subscription to the Journal of Graph Theory includes a subscription to the Journal of Combinatorial Designs.

Statistical Analysis and Data Mining

Statistical Analysis and Data Mining is intended to encourage collaborations across disciplines, communicating novel data mining and statistical techniques to both novices and experts involved in the analysis of data from practical problems.

Statistical Analysis and Data Mining addresses the broad area of data analysis, including data mining algorithms, statistical approaches, and practical applications. Topics include problems involving massive and complex datasets, solutions utilizing innovative data mining algorithms and/or novel statistical approaches, and the objective evaluation of analyses and solutions. Of special interest are articles that describe analytical techniques, and discuss their application to real problems, in such a way that they are accessible and beneficial to domain experts across science, engineering, and commerce.

Statistical Analysis and Data Mining invites the submission of articles that satisfy one or more of the following criteria:

- Solve data analysis problems associated with massive, complex datasets
- Are application and solution oriented with a focus on solving real problems
- Describe innovative data mining algorithms or novel statistical approaches
- Compare and contrast techniques to solve a problem, along with an objective evaluation of the analyses and the solutions

Ask your librarian to register for complimentary online access!
Your institution can opt to receive complimentary online access to Statistical Analysis and Data Mining throughout 2007 & 2008.
