- o The deceptively young-looking Prof. Nozoe must be secreting antihormones such as ajungalactone, as well as the hair-growth factor himokitiol.

This is a tremendous advantage when going to Japanese bars and surrounded by pretty hostesses.

Another secret for his youth-like appearance is successful operation of the "Nozoe-spa" (public bath), which is made possible by the totally free supply of water from the city of Sendai (a privilege extended only to honorary citizens).
