

(1770)

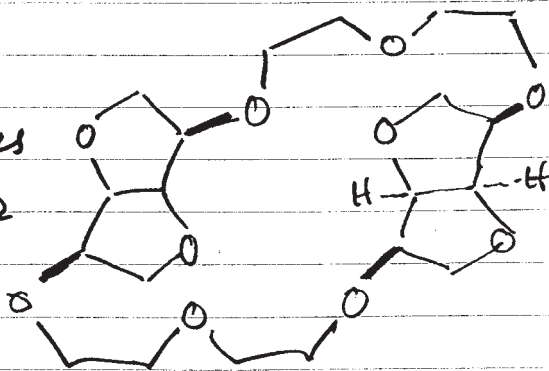

Does oestradiol have the original "Bay Region" for oxidative metabolism to an ultimate carcinogen?

C. M. Macleburn

28.1.81.

This 30-crown-10 derivative complexes  $R^1NH_3^+$  and  $R^2NH_2$  species 'side-by-side.' Has it potential as an enzyme analogue?

J. F. Stoeckert
