

(1778)

-10.

Specific reaction of N-terminus of proteins

Also analogues $-\text{CH}_2-\text{PO}_3H_2$

$-\text{CH}_2-\text{AsO}_3H_2$

as substrates of enzymes

whose natural substrates are $-\text{O}-\text{PO}_3H_2$

Hal Dixon

30.1.81

Department of Biochemistry
Cambridge

my father, Alfred Walden, was, in 1920, professor of Organic Chemistry in Wilson College, Bombay. He gave up this advanced work and a distinguished career to teach science in an Indian Boy's High School considering it was for the best for Indian Science.
