

## Abstracted Journals

The Source Index lists the titles of all journals currently abstracted in ChemInform. The papers are selected according to ChemInform coverage principles (inorganic, physical, low molecular organic, organoelement chemistry). Reviews and highlights may also be selected from other journals not listed in the index. The index contains all changes registered by the editorial office in 2014: admission of new journals, correction of journal titles, CODEN, etc.

Russian, Chinese and Japanese journals are arranged by their transliterated titles and, whenever applicable, by their English subtitles.

The publications are abstracted in accordance with the scope of ChemInform. This list was updated on **January 1, 2015** and can be supplemented at any time. Further information on the reports covered may be obtained from the editorial offices.
